Introduction

This annual publication presents the findings of a 100-percent canvass of pulpmills that draw roundwood or wood residues from the 13 Southern States. Canvass data are compiled, analyzed, and reported annually by the Forest Service, U.S. Department of Agriculture, Southern Research Station. In 2006, 82 of the 87 mills canvassed responded. Past canvass data and other sources of information were used for mills that did not respond. Mill data reported in nonstandard units were converted to standard cords using regional conversion factors. All production figures are reported in cords and do not include pulpwood that is exported out of the country. Production expressed in equivalent green tons is reported in tables A.1, A.2, and A.6 through A.19.

Pulpwood

Total southern pulpwood production, which includes both roundwood chipped at pulp mills or at independent chip mills, and other primary industry mill residues, was up 1 percent in 2006 to 64.7 million cords, or 170.9 million green tons. At 46.0 million cords, softwood production increased nearly 750,000 cords, or 2 percent. Hardwood production was down only 58,000 cords, remaining relatively stable at 18.7 million cords. In 2006, the South Central Region's (Alabama, Arkansas, Kentucky, Louisiana, Mississippi, Oklahoma, Tennessee, and Texas) pulpwood production increased nearly 1 percent from 34.7 million cords to 34.9 million cords. Softwood pulpwood production increased nearly 2 percent in the South Central Region; however, this increase was partially offset by a 1-percent decline in hardwood production of more than 152,000

cords. The Southeast's (Florida, Georgia, North Carolina, South Carolina, and Virginia) pulpwood production was up nearly 2 percent from 29.3 million cords to 29.8 million cords (table A.1). Softwood pulpwood production was up 2 percent in this region, or 397,000 cords, while hardwood production increased nearly 94,000 cords, or 1 percent. Alabama's pulpwood production increased 3 percent in 2006 to 10.5 million cords, and led the South in total pulpwood production (fig. 1). Georgia's production increased 6 percent from 9.7 million cords to 10.2 million cords. Production in Mississippi was up 3 percent to 7.1 million cords, while Louisiana's production was up 2 percent to 6.3 million cords. South Carolina's production increased 2 percent to 6.1 million cords. Collectively, these five States accounted for more than 40 million cords, or 62 percent of the South's total production in 2006 (table A.2). Softwood roundwood and residues combined accounted for 71 percent of the total southern pulpwood production, while hardwoods accounted for the remaining 29 percent (table A.3).

Roundwood

Roundwood pulpwood continues to be the primary fiber source used in pulp manufacture in the South, accounting for 72 percent of the total southern pulpwood production in 2006, the same as in 2005, but compared to 74 percent in 2004 and 72 percent of total pulpwood production in 2003 (fig. 2). Overall, the South's roundwood production remained relatively stable increasing only 123,000 cords to a total of 46.3 million cords (table A.4). Softwood accounted for 68 percent of the total roundwood production. Softwood roundwood production was up 2 percent, or more than 500,000 cords, while hardwood roundwood production declined nearly 379,000 cords, or 3 percent. Only five

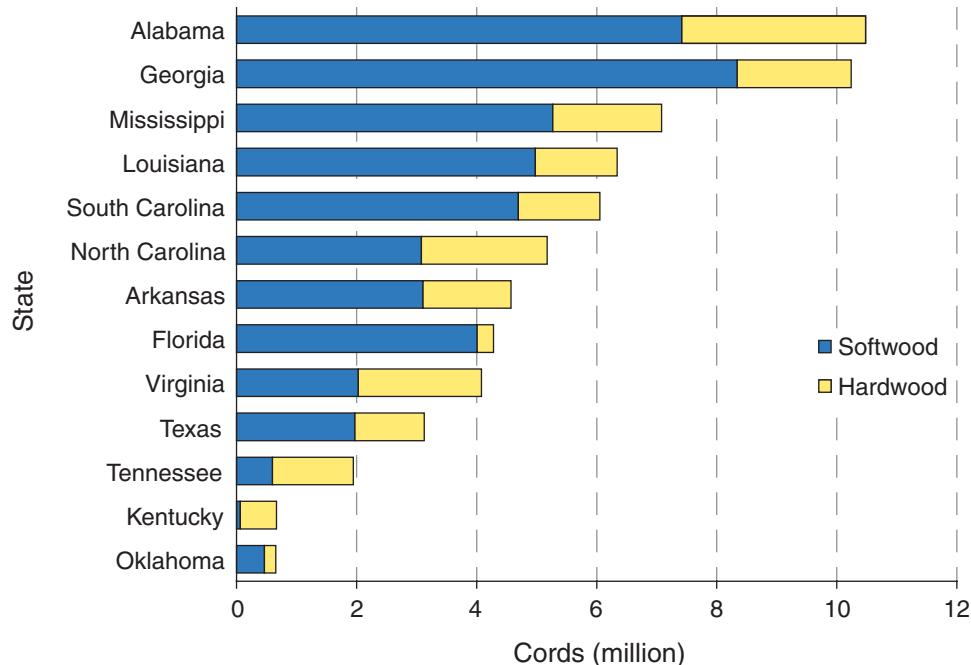

Figure 1—Pulpwood production by State and broad species, 2006.

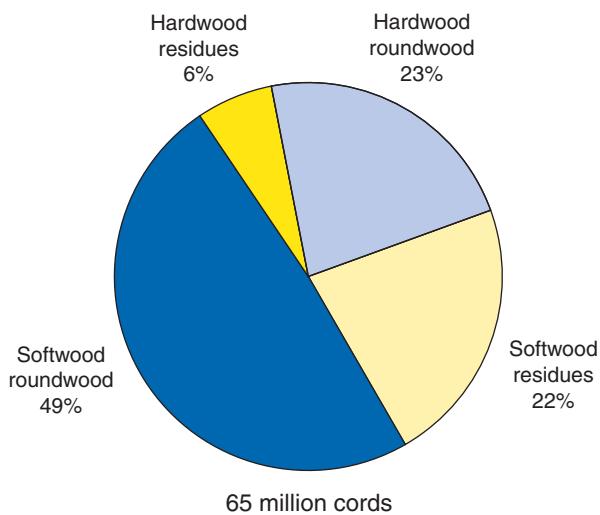

Figure 2—Softwood and hardwood components of southern pulpwood production, 2006.

Southern States—Alabama, Florida, Georgia, Louisiana, and Mississippi—showed increases in roundwood production, ranging from 1 to 8 percent. Most Southern States showed small to moderate declines in roundwood production. Georgia's roundwood production increased 8 percent and led in total roundwood production with 7.82 million cords and was the leading producer of softwood roundwood at 6.4 million cords. Alabama's roundwood production increased 2 percent and was a very close second to Georgia in total roundwood production with 7.8 million cords. Alabama was the leading producer of hardwood roundwood, at 2.5 million cords. Mississippi, Louisiana, and South Carolina followed with 5.0, 4.7, and 4.4 million cords, respectively. Combined production in these five States amounted to 29.7 million cords, or 64 percent of the South's roundwood total.

Wood Residues

Mills reported two types of receipts: (1) roundwood and (2) wood residues. Wood residues consist primarily of mill residue chips, a byproduct of sawmilling and veneer mill operations. Chips that are produced in the woods or generated when material received as roundwood by primary producers is chipped instead of being milled are not technically wood residues, but are reported as mill residues in this bulletin.

In 2006, wood residue production in the South increased 3 percent from 17.8 million cords in 2005 to 18.3 million cords, or 44 million tons (table A.5). Softwood residue production increased 2 percent to 14.3 million cords and accounted for 78 percent of wood residues produced. Hardwood residue production was up from 3.7 million cords in 2005 to 4.1 million cords, a 9-percent increase. Eight Southern States showed an increase in wood residue production, while five States had moderate declines ranging from 1 to 20 percent. Alabama led Southern States in the production of wood residues at 2.7 million cords, followed

by Georgia with 2.4 million cords, and Mississippi, North Carolina, and Louisiana with 2.1, 1.8, and 1.7 million cords, respectively. Combined wood residue production in these five States amounted to 10.6 million cords, or 58 percent of the South's total.

County or Parish Production

Table A.6 summarizes pulpwood production in the South by source of wood, State, year, and number of mills for the years 1995–2006. Tables A.7 through A.19 report county and parish (herein county) patterns of 2006 roundwood pulpwood production for domestic pulpmills for the individual Southern States. Wood residues and pulpwood production exported outside the United States are not included in these figures because the county of origin for the residues and exports are difficult, if not impossible, to determine. Of the 1,002 counties in the Southern States, 900 produced softwood or hardwood roundwood or both in 2006 compared to 872 in 2005, 873 in 2004, and 893 in 2003. Of the producing counties, only 14, or 2 percent, harvested more than 250,000 cords of softwood and hardwood roundwood combined, with 10 of the 14 counties in Alabama and Louisiana. Fourteen percent, or 127 counties evenly distributed across the South, had roundwood pulpwood production ranging between 100,000 and 250,000 cords, while 185 counties had production that ranged between 50,000 and 99,999 cords. The remaining 574 counties, or 64 percent of producing counties, had production of < 50,000 cords. Figures 3 and 4 show production of softwood and hardwood roundwood pulpwood in cords per square mile, which discounts the effect of county size on concentration of production. In both figures, counties in the dark shade of red are those that produced more than 100 cords per square mile. Across the South, 204 counties had production of more than 100 cords of softwood per square mile, while only 32 counties had hardwood production in that range (table 1).

A barometer for degree of local competition for pulpwood is the number of mills procuring wood from each county (figs. 5 and 6). In 352 of the producing counties, or 39 percent, 1 to 3 mills were actively procuring both softwood

Table 1—Number of producing counties in the South, by range of cords per square mile for softwood and hardwood roundwood, 2006

Range cords/sq. mi.	Softwood number of counties	Hardwood number of counties
0	54	38
0.001–10.0	244	259
10.1–50.0	220	440
50.1–100.0	178	131
100.1–593.7	204	32
Total	900	900

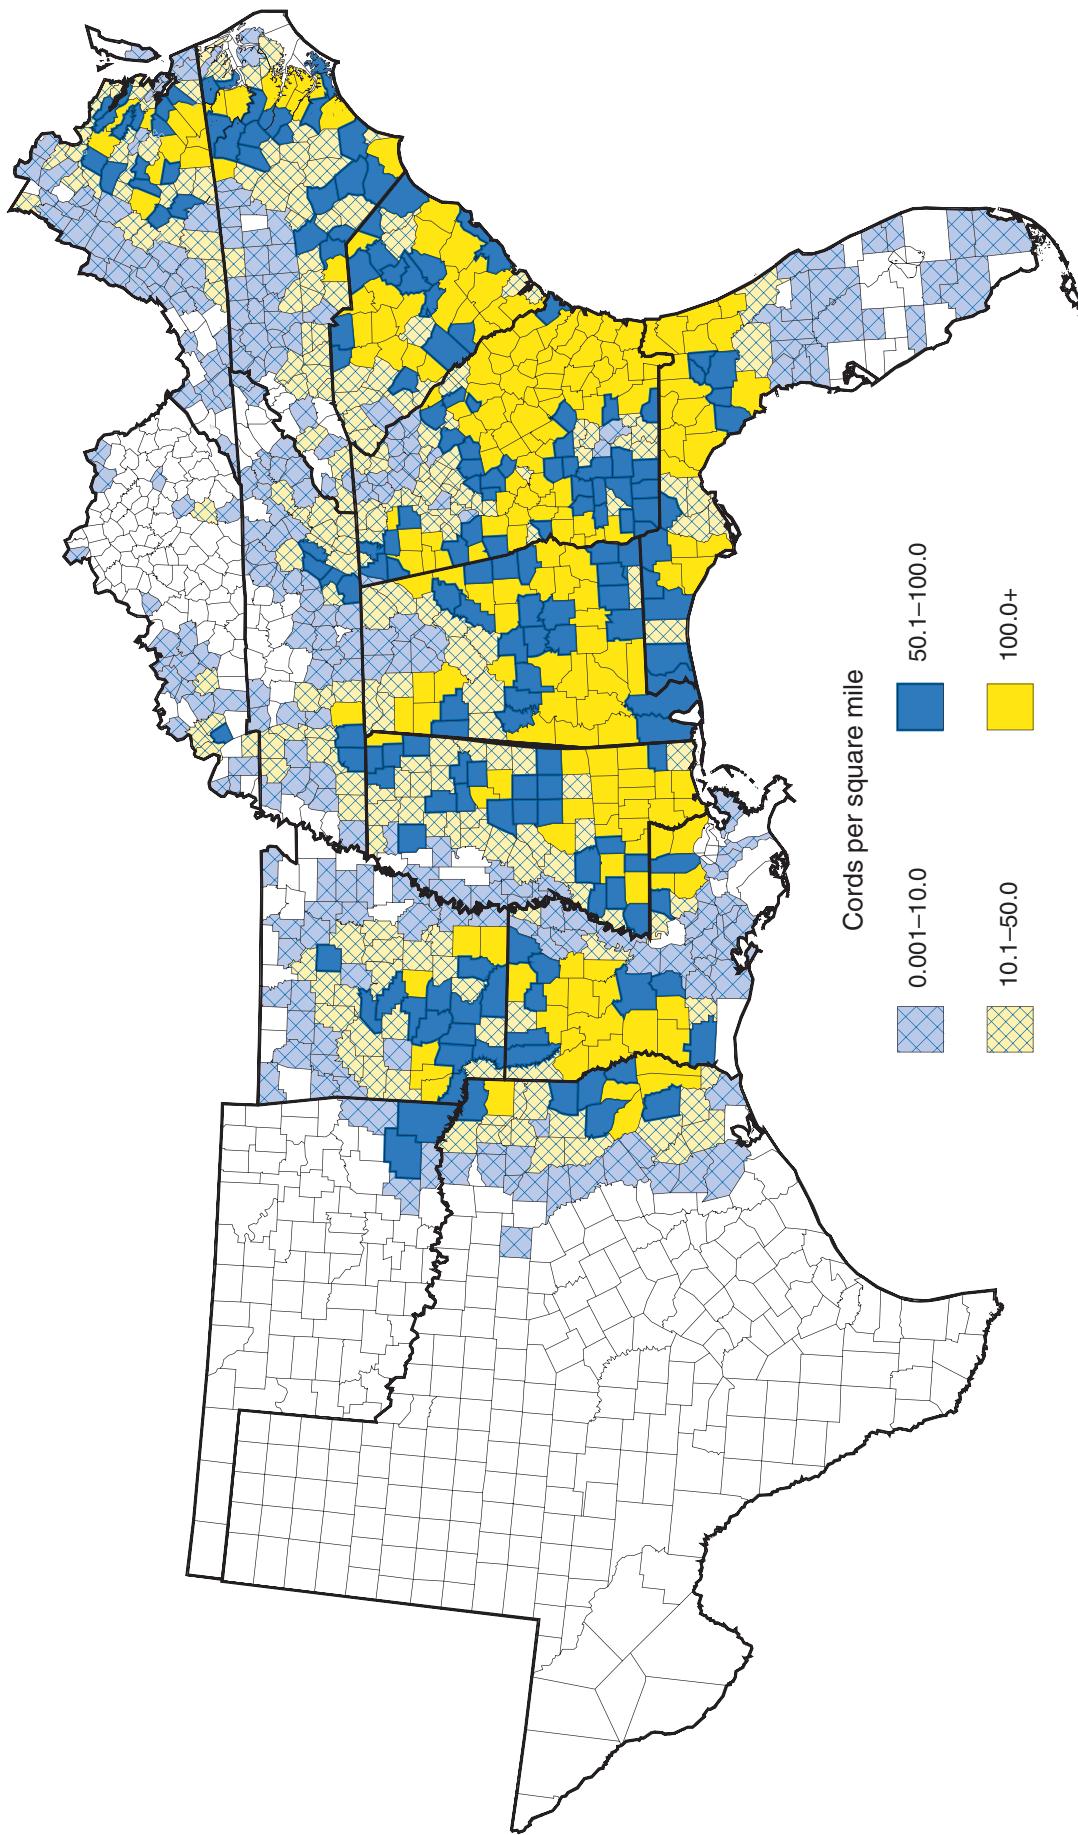

Figure 3—Softwood roundwood production in the South by county or parish, 2006.

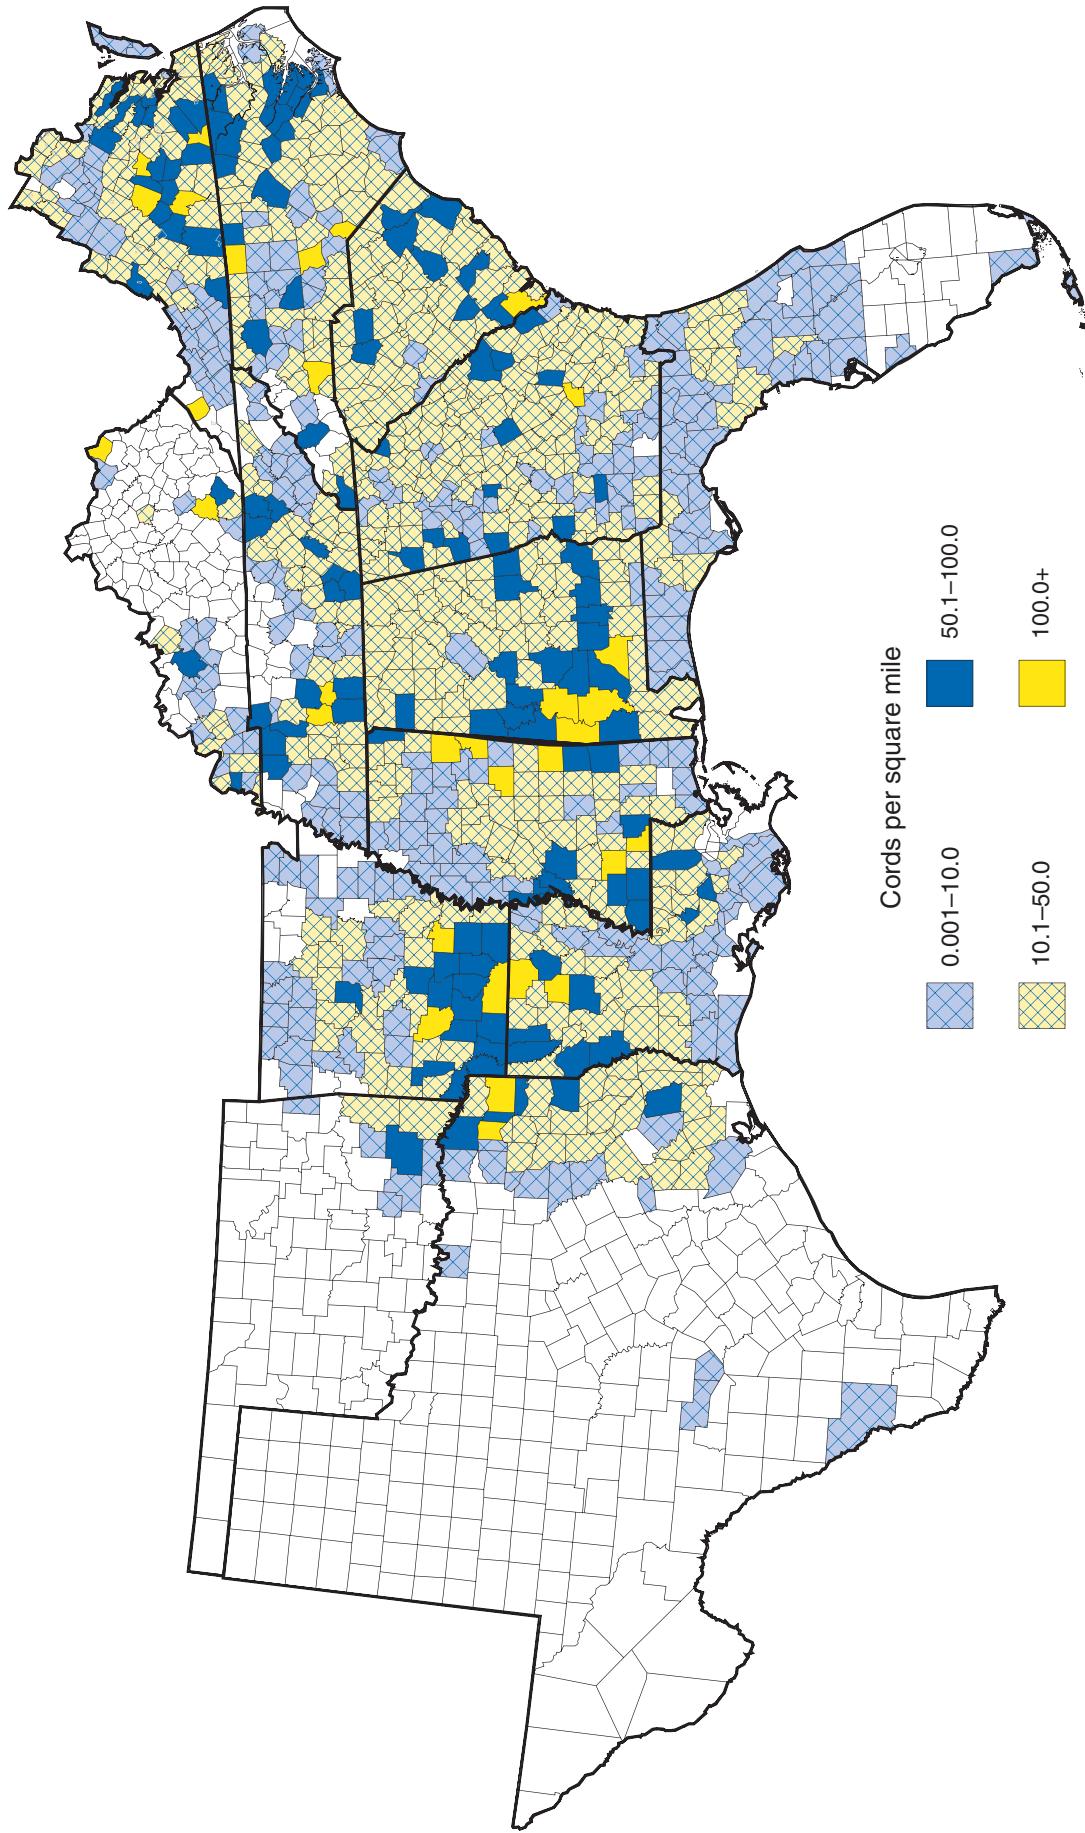

Figure 4—Hardwood roundwood production in the South by county or parish, 2006.

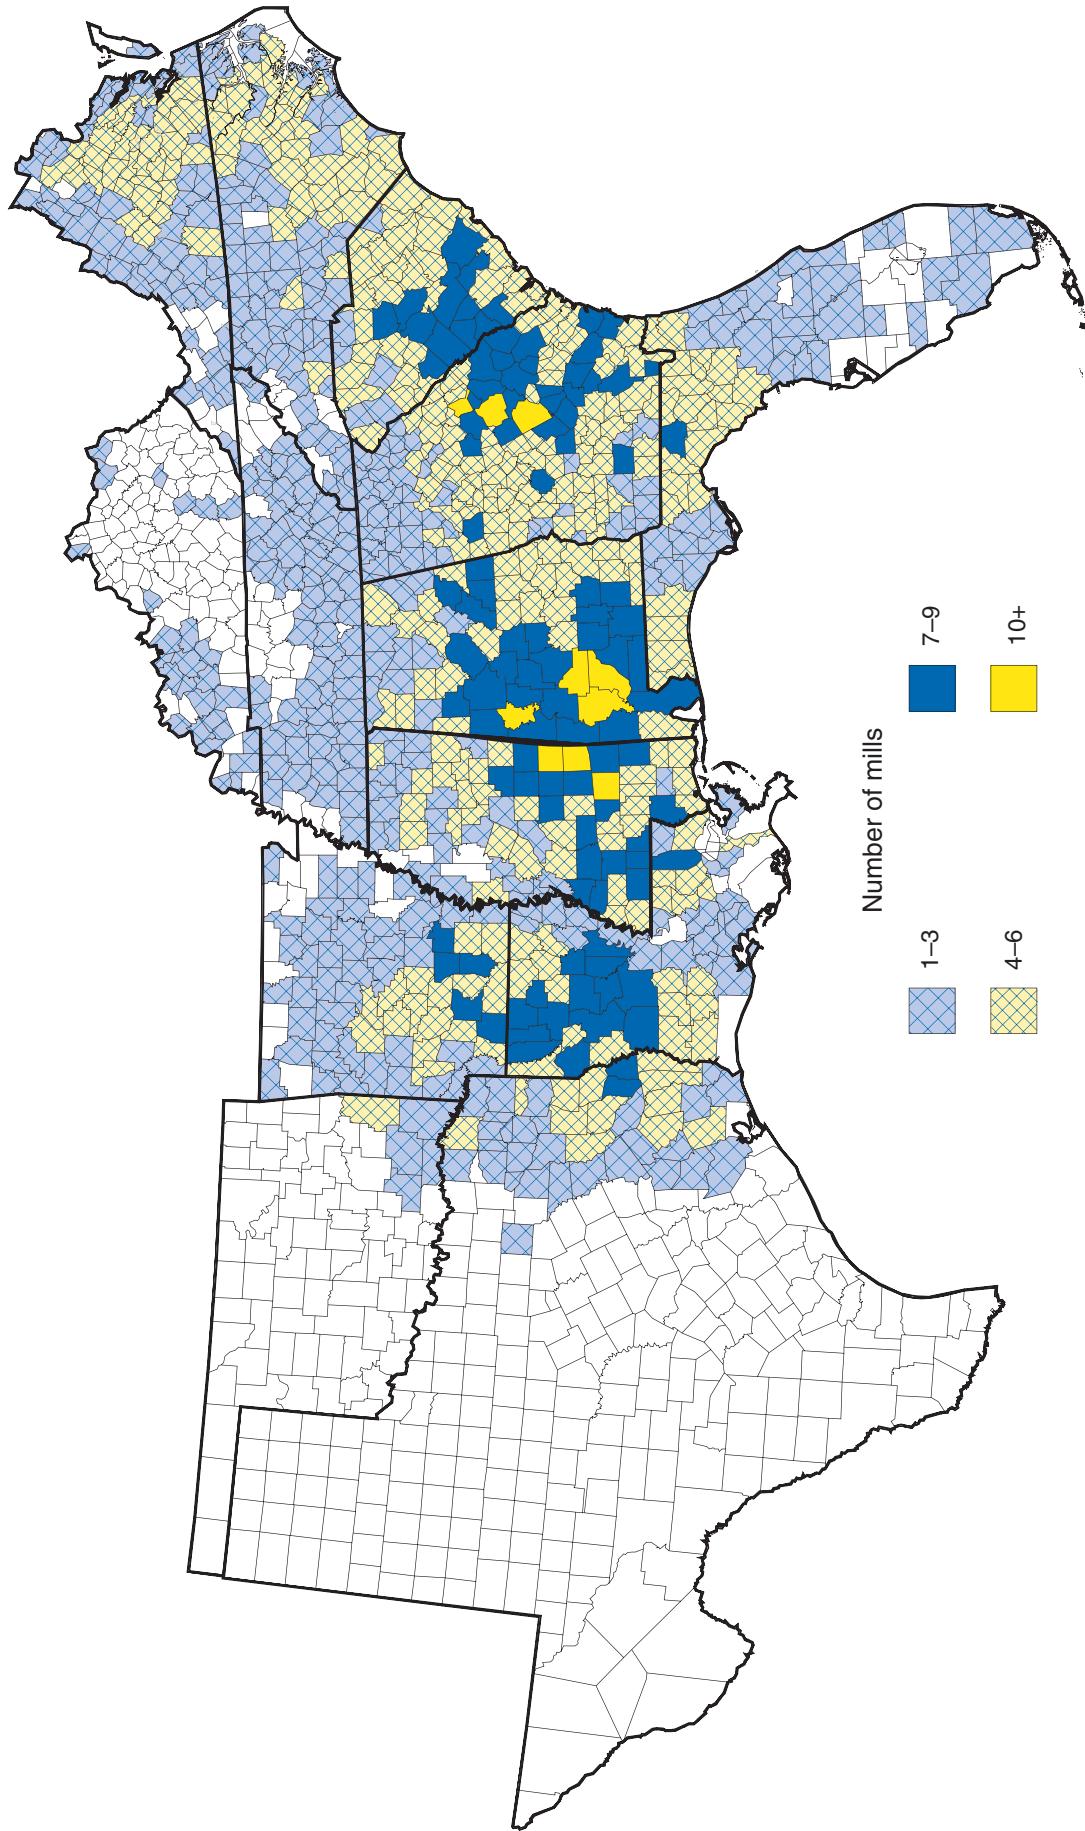

Figure 5—Number of mills competing for softwood roundwood by county or parish, 2006.

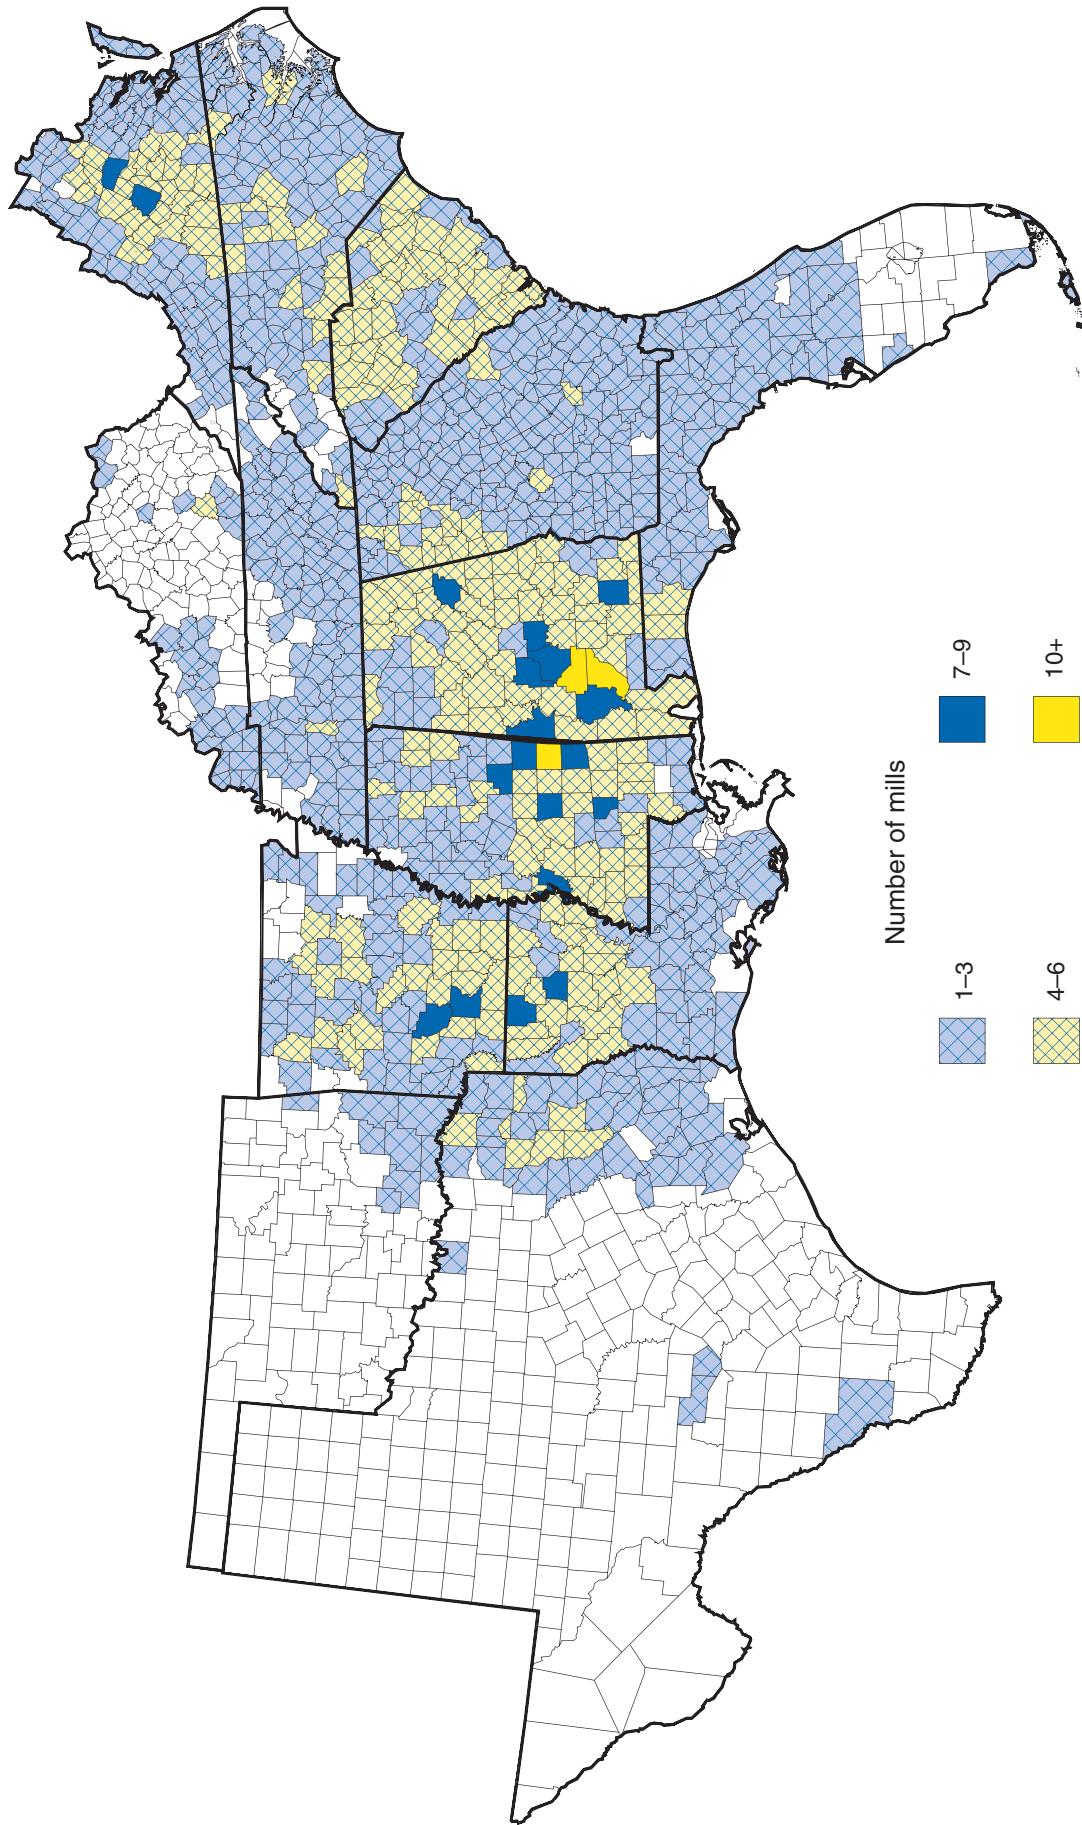

Figure 6—Number of mills competing for hardwood roundwood by county or parish, 2006.

and hardwood roundwood (table 2). In 343 counties, or 38 percent, 4 to 6 mills were actively procuring wood; and in the remaining 205 counties, or 23 percent, 7 or more mills were active. By comparison, in 1997 a peak year for southern pulpwood production, there were 103 pulpmills active in the South (table A.6) and 347 counties, or 38 percent, had 7 or more mills competing for wood.

Roundwood Movement

Tables A.20 and A.21 show the softwood and hardwood roundwood pulpwood movement for the Southeast and South Central Regions. Numbers in boxes represent roundwood harvested and retained for processing within each

State. The numbers in rows to the left and right of those boxed numbers represent wood exported to the other States. Therefore, the sum of the figure for retained wood and the figure for wood exported out of State is the total roundwood production for the State. The numbers in columns either above or below the figures for retained wood represent wood that was imported from other States. The sum of the retained figure and the figure for wood imported from other States represents roundwood receipts or the amount of roundwood processed by mills in a State.

The South Central Region was a net importer of roundwood pulpwood. For both softwood and hardwood combined, imports exceeded exports by 283,731 cords (tables A.20 and A.21). Softwood imports exceeded exports by only 15,893 cords, while hardwood imports exceeded exports by 267,838 cords. The Southeast was a net exporter of pulpwood with softwood and hardwood exports exceeding imports by 195,453 cords. Softwood exports exceeded imports by 73,998 cords, while hardwood exports exceeded imports by 121,455 cords. Southwide, pulpwood receipts, or consumption, exceeded production by 88,278 cords.

Mills

In 2006, 87 southern pulpmills were operating and drawing wood from the 13 Southern States (fig. 7), the same as in 2005. At the same time, total southern mill pulping capacity increased from 124,567 tons per day in 2005 to 125,093

Mills number	Combined ^a number of counties	Softwood ^b	Hardwood ^c
0	0	54	38
1–3	352	424	613
4–6	343	306	227
7–9	172	106	19
10+	33	10	3
Total	900	900	900

^a Combined is counties with mills procuring both softwood and hardwood.

^b Softwood is counties with mills procuring only softwood.

^c Hardwood is counties with mills procuring only hardwood.

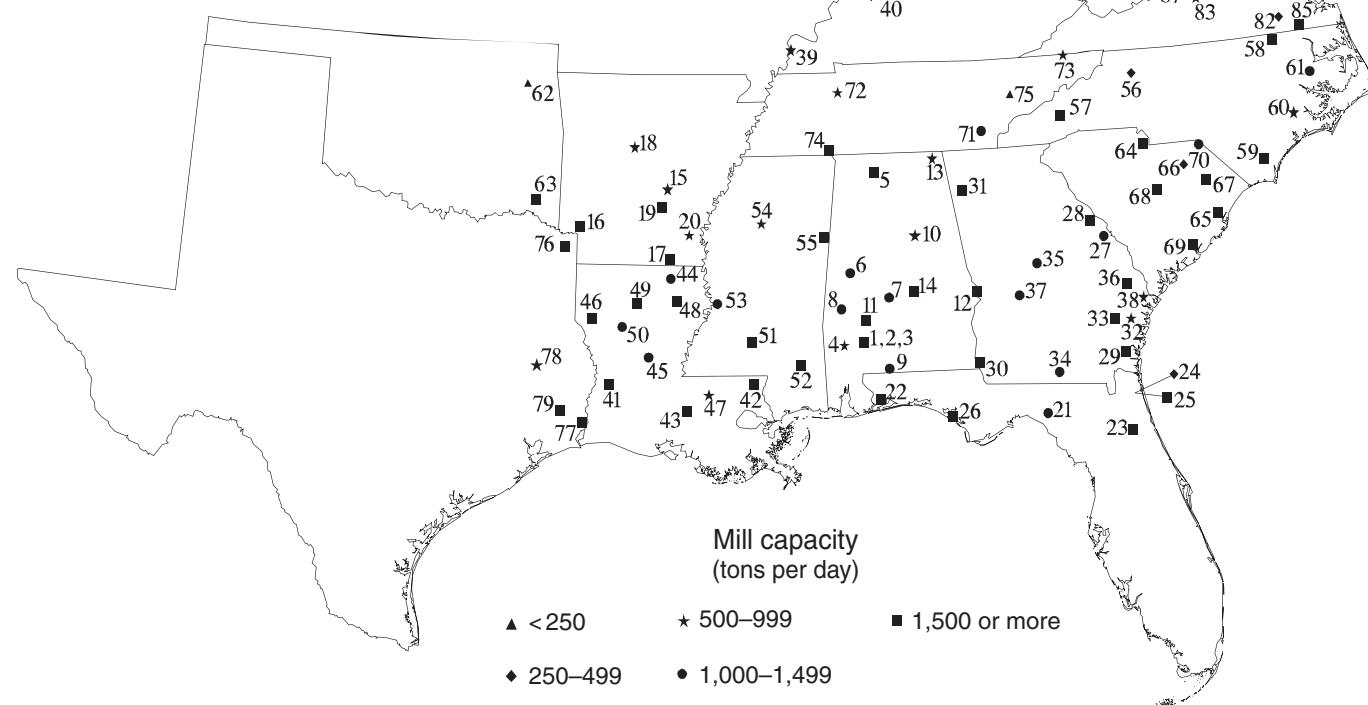

Figure 7—Capacity of southern pulpmills operating and drawing wood from the 13 Southern States, 2006. Numerals are coded on Table A.22.

tons per day in 2006. Southern mills account for more than 70 percent of the Nation's total pulping capacity. Daily capacity of individual mills ranged from 50 tons to 3,600 tons. In 1992, average pulpmill capacity was 1,295 tons per day, increased to 1,386 tons per day in 1999, and then dropped to 1,310 tons per day in 2001. The average daily capacity totaled 1,438 tons per day in 2006, slightly higher than in 2005 and in 2004. The sulfate process dominated the industry in 2006, accounting for 89 percent of mill capacity. Groundwood or other mechanical processes accounted for 6 percent, semichemical 4 percent, and soda and other chemical processes 1 percent (table A.22). These proportions have remained relatively stable over the past few years. Based on 2006 production and mill capacity, and using an average of 350 total operating days, southern pulpmills operated at 92-percent capacity.

Alabama and Georgia continued to lead the South in the number of mills operating with 14 and 12, respectively. Georgia led in pulping capacity with 20,935 tons per day, to

Alabama's 20,032 tons per day (table 3). In addition, three pulpmills outside the Southern Region drew wood from the South in 2006 (table A.23).

Trends

From 1997 through 2006, southern pulpwood production declined by nearly 15 percent, from 75.9 (200.9 million green tons) to 64.7 million cords (170.9 million green tons) (fig. 8). During the same period, roundwood pulpwood production declined from 54.2 to 46.3 million cords, a 15-percent loss. Between 1997 and 2006, softwood roundwood production declined 7 percent, while hardwood roundwood production declined 28 percent. The production of wood residues declined 15 percent from 21.7 million cords in 1997 to 18.3 million cords in 2006. Wood residues continue to be an important source of fiber for the pulp and paper industry in the South. Wood residues accounted for 28 percent of total pulpwood production in 2006, about the same as in 1997.

Table 3—Number of pulpmills and pulping capacity, by State, 2006

Johnson, Tony G.; Steppleton, Carolyn D. 2008. Southern pulpwood production, 2006. Resour. Bull. SRS-134. Asheville, NC: U.S. Department of Agriculture Forest Service, Southern Research Station. 42 p.

The South's production of pulpwood increased from 64.0 million cords in 2005 to 64.7 million cords in 2006. Roundwood production increased 123,300 cords to 46.3 million cords and accounted for 72 percent of the total pulpwood production. The use of wood residue increased 3 percent to 18.3 million cords. Alabama led the South in total production at 10.5 million cords. In 2006, 87 mills were operating and drawing wood from the 13 Southern States. Pulping capacity of southern mills increased from 124,567 tons per day in 2005 to 125,093 tons per day, and still accounts for more than 70 percent of the Nation's pulping capacity.

Keywords: FIA, pulping capacity, pulpmills, pulpwood, residues, roundwood.

The Forest Service, U.S. Department of Agriculture (USDA), is dedicated to the principle of multiple use management of the Nation's forest resources for sustained yields of wood, water, forage, wildlife, and recreation. Through forestry research, cooperation with the States and private forest owners, and management of the National Forests and National Grasslands, it strives—as directed by Congress—to provide increasingly greater service to a growing Nation.

The USDA prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, SW, Washington, DC 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.
