Introduction

The Forest Inventory Analysis (FIA) unit of the Southern Research Station annually compiles, analyzes, and reports canvass data of pulpmills in the South. This report for 2009 presents the findings of a 100 percent canvass of pulpmills that drew roundwood or wood residues from the 13 Southern States. Of the 83 mills canvassed, 81 responded. For the two mills that did not respond, previous canvass data and other sources of information were used for the findings reported in this publication. Regional conversion factors were used to convert mill data reported in nonstandard units to standard cords. The report gives all production figures in cords and does not include pulpwood that is exported out of the country. Tables A.1, A.3, and A.7 through A.19 of the report express equivalent green tons of production. Unless otherwise indicated, the context for production comparisons (increases, decreases, or stabilizations) throughout the report is the change from 2008 to 2009.

Pulpwood

Total Southern pulpwood production, which includes both roundwood chipped at pulp mills or at independent chip mills and other primary industry mill residues, was down 9 percent, 5.8 million cords, to 61.2 million cords (162.2 million green tons) (table A.1). This decline comes after 5 years of pulpwood production increases and puts total production slightly below the level seen in 2003. At 45.5 million cords, softwood production declined 3.7 million cords, or nearly 8 percent. Hardwood production was down 12 percent, from 17.8 million cords to 15.7 million cords. Softwood roundwood and residues combined accounted for 74 percent of the total

Southern pulpwood production, while hardwoods accounted for the remaining 26 percent (table A.2). Total Southern pulpwood production was 19 percent lower than the record volume of 75.9 million cords (200.9 million green tons) reported in 1997.

Pulpwood production in the South Central region (Alabama, Arkansas, Kentucky, Louisiana, Mississippi, Oklahoma, Tennessee, and Texas) declined 11 percent, from 35.8 million cords to 31.7 million cords. Softwood pulpwood production was down 2.8 million cords, or nearly 11 percent, in the region, while hardwood production fell 1.3 million cords, or 12 percent. The South Central region's production was down 25 percent, or 10.8 million cords (28.3 million green tons) from the peak year of 1997. Between 1997 and 2009, the South Central region lost 14 pulpmills and 14 percent of its pulping capacity. This region accounts for 54 percent of the South's total pulping capacity.

Production in the Southeast (Florida, Georgia, North Carolina, South Carolina, and Virginia) dropped nearly 6 percent, from 31.2 million cords to nearly 29.5 million cords. Softwood production was down 4 percent in this region, or 960,000 cords, while hardwood production declined nearly 12 percent, or 843,000 cords. From its peak year of 1997, the Southeast region's production declined 12 percent, or 3.9 million cords (10.4 million green tons). Between 1997 and 2009, the Southeast lost six pulpmills and 10 percent of its pulping capacity.

Georgia's pulpwood production declined 13 percent to 10.0 million cords, but still led the South in total pulpwood production (fig. 1). Alabama's production was down

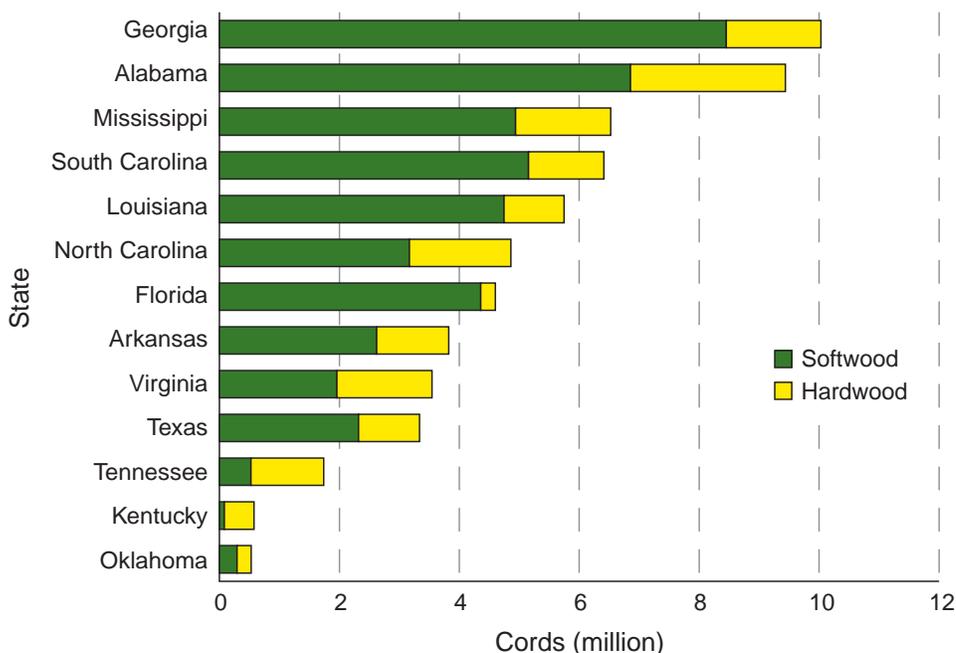

Figure 1—Pulpwood production by State and broad species, 2009.

11 percent to 9.4 million cords. Production in Mississippi was down 9 percent to 6.5 million cords. Pulpwood production in South Carolina increased 2 percent to 6.4 million cords. Louisiana's and North Carolina's production dropped 12 and 10 percent to 5.7 and 4.9 million cords, respectively. Collectively, these six States accounted for 43.0 million cords, or 70 percent, of the South's total 2009 production (table A.3).

Roundwood

Roundwood pulpwood continues to be the primary fiber source used in pulp manufacture in the South. In 2009, it accounted for 76 percent of the total Southern pulpwood production (fig. 2). This represents an increase over 2008 when roundwood accounted for 73 percent of total pulpwood production. Between 2003 and 2006, roundwood comprised between 72 and 74 percent. Overall, from 2008 to 2009, the South's roundwood production declined by 2.3 million cords, or 5 percent, from 48.8 to 46.5 million cords (table A.4). At 34.2 million cords, softwood accounted for nearly 74 percent of the total roundwood production. Between 2008 and 2009, softwood roundwood production was down by 3 percent, or 1.1 million cords, while hardwood roundwood production declined by 1.2 million cords, or 9 percent. In comparison to the peak year of 1997, softwood roundwood production was up by 235,500 cords, or 1 percent, while hardwood roundwood production dropped by 7.9 million cords, or 39 percent.

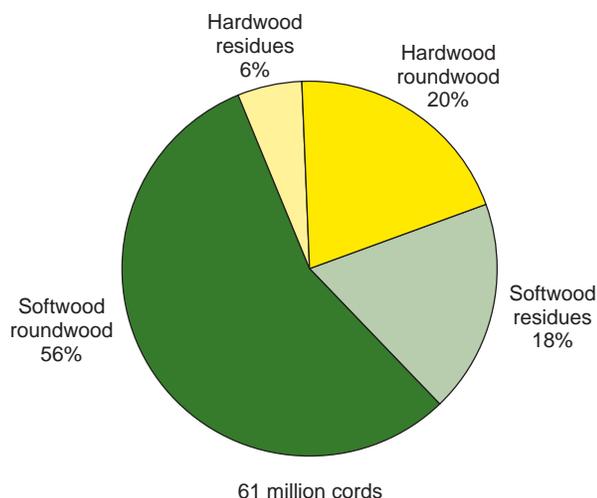

Figure 2—Softwood and hardwood components of Southern pulpwood production, 2009.

Eight Southern States—Alabama, Arkansas, Georgia, Louisiana, North Carolina, Oklahoma, Texas, and Virginia—showed a decline in roundwood production, with respective declines ranging from 5 to 15 percent. Five Southern States showed small to moderate increases in roundwood production. Georgia's roundwood production dropped 13 percent but still led in total roundwood production, with 8.0 million cords, and as producer of softwood roundwood, with 6.8 million cords. At 7.1 million cords, Alabama ranked second in total roundwood production and was the leading producer of hardwood roundwood, at 2.0 million cords. Roundwood pulpwood production in Mississippi, South Carolina, Louisiana, and Florida was 5.3, 4.8, 4.5, and 3.7 million cords, respectively. Combined production in these six States was 33.4 million cords, for 72 percent of the South's roundwood total.

Wood Residues

Mills reported two types of receipts: roundwood and wood residues. Wood residues consist primarily of mill residue chips, a byproduct of sawmilling and veneer mill operations. This publication reports certain residues that technically are not wood residues, such as chips produced in the woods or generated when material received as roundwood by primary producers is chipped instead of milled.

Wood residue production in the South dropped by 3.6 million cords, to 14.6 million cords, or 35.4 million tons (table A.5). Softwood residue production declined by 19 percent to 11.2 million cords but still accounted for 77 percent of total wood residues. Hardwood residue production fell by 970,000 cords, or 22 percent, to 3.4 million cords.

Only one Southern State, South Carolina, showed an increase in wood residue production, while 12 States showed moderate to substantial declines ranging from 4 to 89 percent. Alabama led Southern States in the production of wood residues with 2.4 million cords, followed by Georgia, South Carolina, Virginia, North Carolina, and Louisiana with 2.0, 1.6, 1.5, 1.4, and 1.3 million cords, respectively. Combined wood residue production in these six States amounted to 10.2 million cords, or 70 percent of the South's total.

County and Parish Production

Table A.6 summarizes pulpwood production in the South by source of wood, State, year, and number of mills for 1998 through 2009. Tables A.7 through A.19 report county and parish (herein county) patterns of roundwood pulpwood production for domestic pulpmills. Exports of wood residues

and pulpwood production exported outside the United States are not included in these figures because of difficulty determining the county of origin for the residues and exports. In 2009, of the 1,306 total counties in the 13 Southern States, 902 counties produced softwood or hardwood roundwood or both; in 2007, this number was 877; in 2006, it was 900; and in 2005, it was 872.

Of counties producing in 2009, only 16, or 2 percent, harvested > 250,000 cords of softwood and hardwood roundwood combined; 9 of the 16 counties were in Alabama and Louisiana. Fifteen percent, or 133 counties evenly distributed across the South, reported roundwood production ranging between 100,000 and 250,000 cords, while 171 counties, or 19 percent, reported production that ranged

between 50,000 and 99,999 cords. The remaining 582 counties or 64 percent of producing counties produced < 50,000 cords. Figures 3 and 4 depict the intensity of production of softwood and hardwood roundwood pulpwood in cords per acre of treated timberland, a measurement that discounts the effect of county size on concentration of production. The reasoning behind and methodology for using treated acres versus total timberland area are discussed in McCollum and Johnson¹. In both figures, counties in the dark shade of green produced > 8 cords per acre of treated timberland. Across the South, 184 counties produced > 8 cords of softwood per acre of treated timberland, while only 28 counties produced > 8 cords of hardwood per acre of treated timberland (table 1).

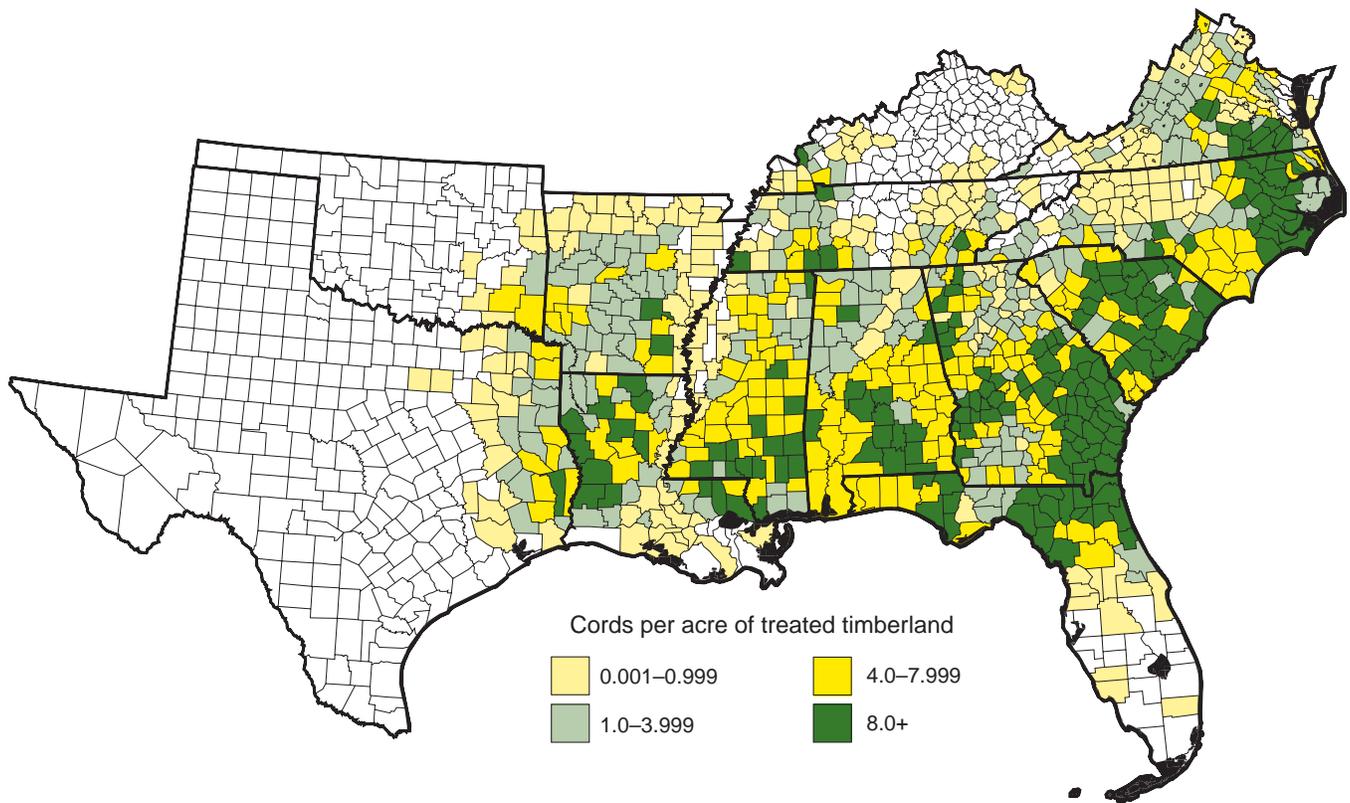

Figure 3—Softwood roundwood production in the South by county or parish, 2009.

¹ McCollum, J.M.; Johnson T.G. Resolving the timber products output canvass with phase 2 data. Manuscript in preparation. McCollum can be reached at Southern Research Station, 4700 Old Kingston Pike, Knoxville, TN 37919. Johnson can be reached at Southern Research Station, 200 W.T. Weaver Blvd., Asheville, NC 28804.

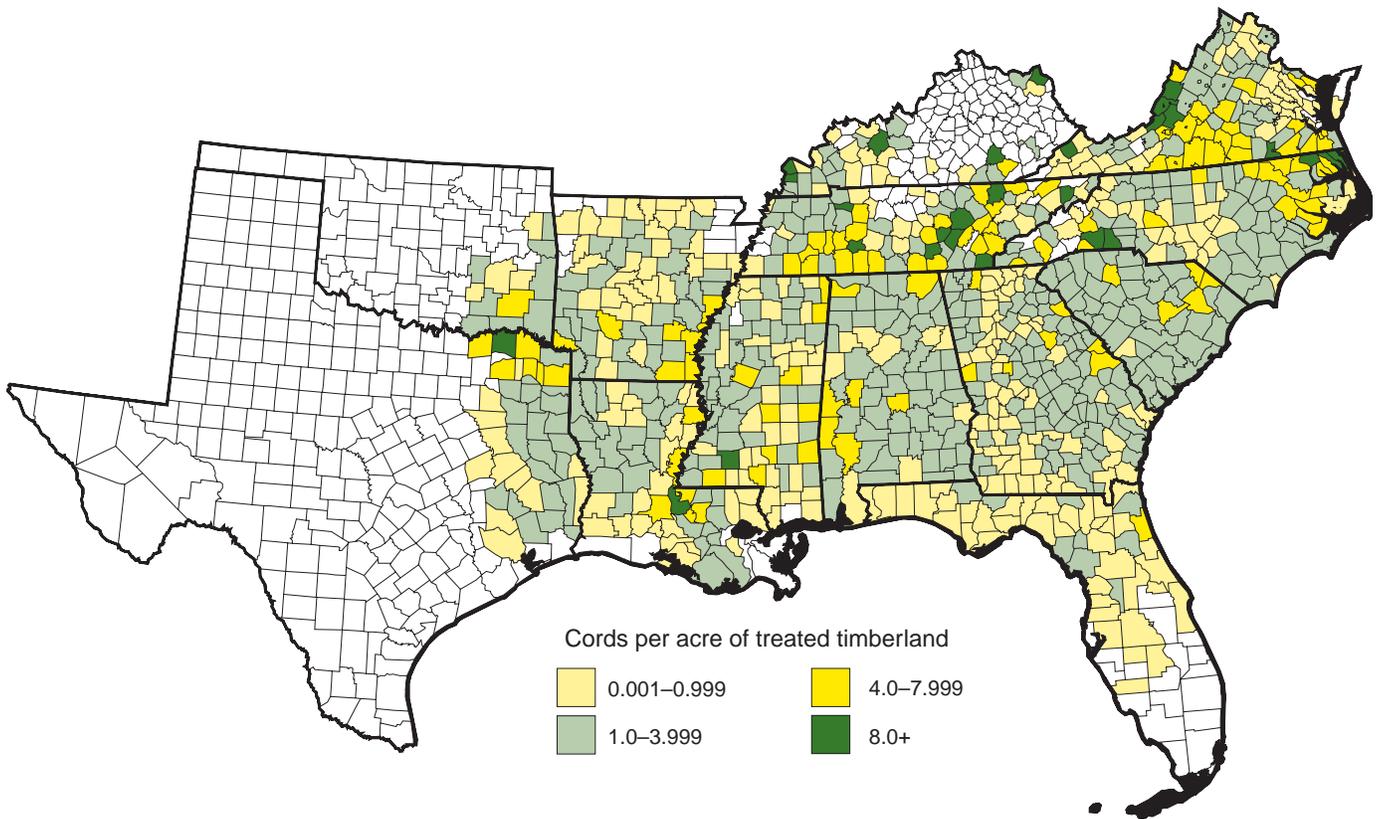

Figure 4—Hardwood roundwood production in the South by county or parish, 2009.

Table 1—Number of producing counties in the South, by range of cords per acre of treated timberland for softwood and hardwood roundwood, 2009

Range <i>cords/treated acre</i>	Softwood <i>number of counties</i>	Hardwood
0	63	20
0.001–0.999	229	305
1.0–3.999	214	436
4.0–7.999	212	113
8.0+	184	28
Total	902	902

A barometer of local competition for pulpwood is the number of pulpmills procuring wood from each county (figs. 5 and 6). In 429, or 48 percent, of the producing counties, 1 to 3 mills were actively procuring both softwood and hardwood roundwood (table 2). In 326, or 36 percent, of the producing counties, 4 to 6 mills were actively procuring wood. In the remaining 147, or 16 percent, of producing counties, 7 or more mills were active. By comparison, in 1997, a peak year for Southern pulpwood production, 103 pulpmills were active in the South, and 347, or 38 percent, of producing counties had 7 or more mills competing for wood.

Roundwood Movement

Tables A.20 and A.21 show the domestic import and export volumes and roundwood movement of softwood and hardwood roundwood between States in the Southeast and South Central regions. Numbers in boxes represent roundwood harvested and retained for processing in each State. The numbers in rows to the left and right of the boxed numbers represent wood exported to the other States. Therefore, the sum of the figure for retained wood and the figure for exported wood is the total roundwood production for the State. The numbers in columns either above or below the figures for retained wood represent wood imported from

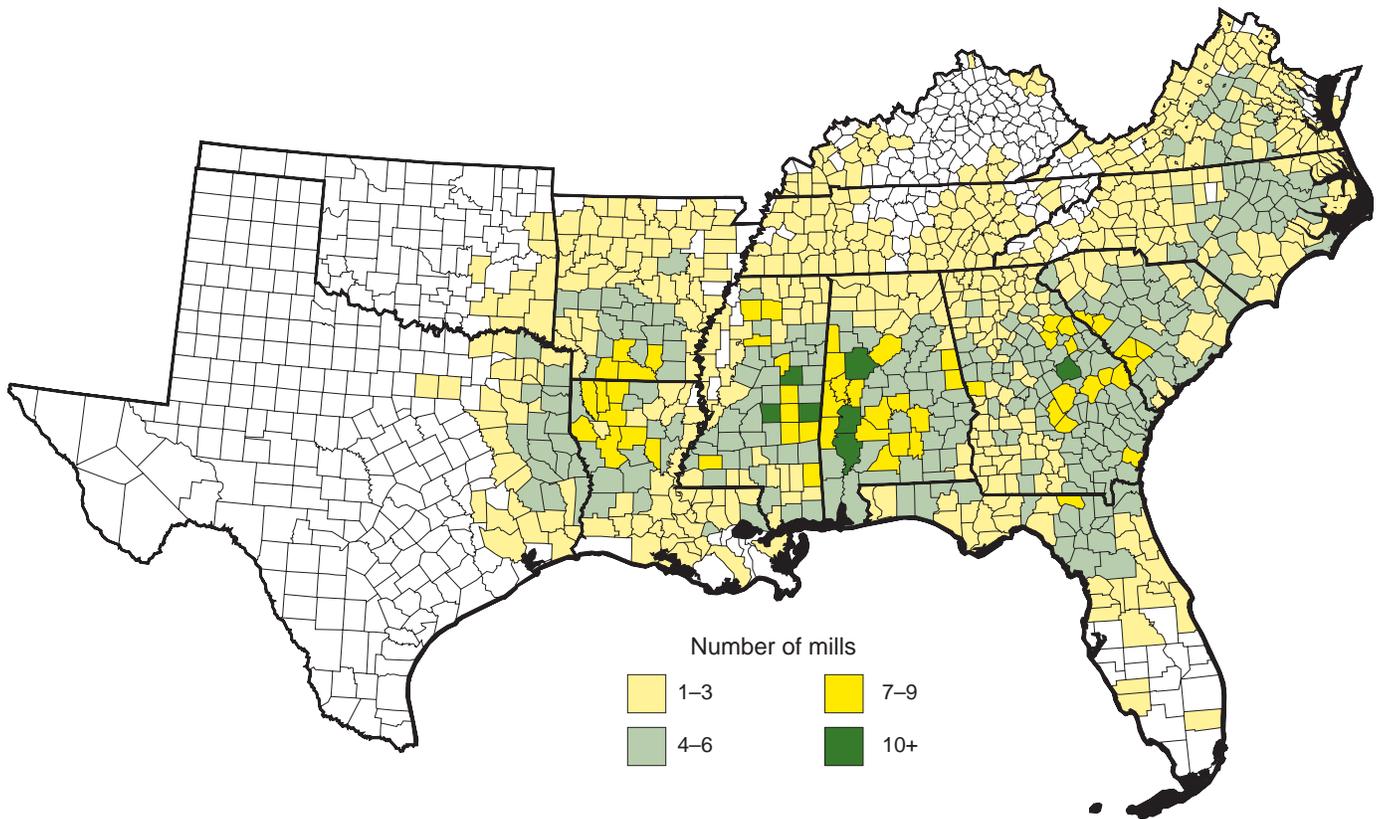

Figure 5—Number of mills competing for softwood roundwood by county or parish, 2009.

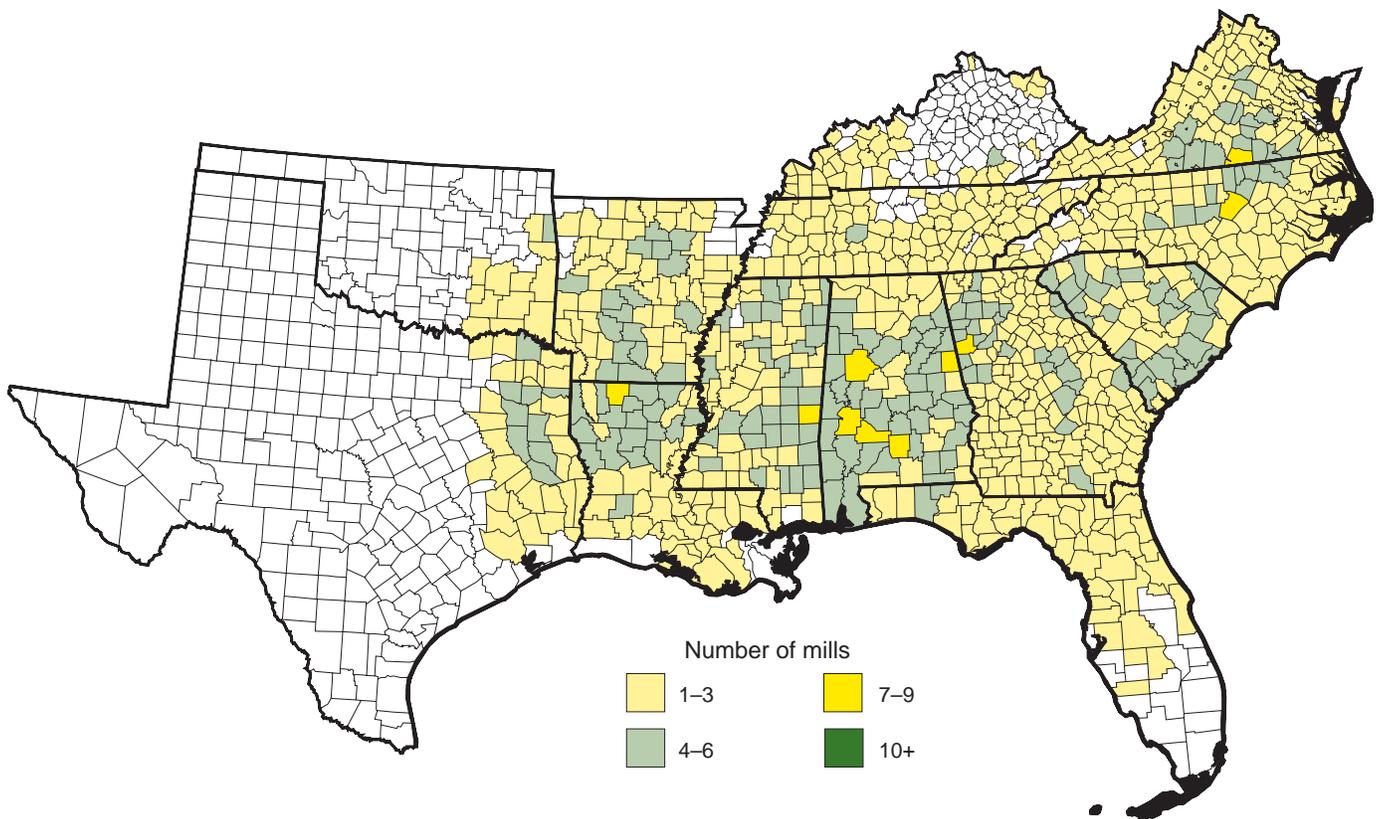

Figure 6—Number of mills competing for hardwood roundwood by county or parish, 2009.

Table 2—Number of producing counties in the South by number of pulp mills procuring softwood and hardwood roundwood, 2009

Mills number	Combined ^a number of counties	Softwood ^b	Hardwood ^c
0	0	63	20
1–3	429	502	674
4–6	326	274	198
7–9	126	56	10
10+	21	7	0
Total	902	902	902

^a Combined is counties with mills procuring both softwood and hardwood.

^b Softwood is counties with mills procuring only softwood.

^c Hardwood is counties with mills procuring only hardwood.

other States. The sum of the retained figure and the figure for wood imported from other States represents roundwood receipts or the amount of roundwood processed by mills in a State.

The South Central region was a net importer of roundwood pulpwood. For softwood and hardwood combined, imports exceeded exports by 178,499 cords (tables A.20 and A.21). Softwood exports exceeded imports by 142,803 cords, while hardwood imports exceeded exports by 321,302 cords. The Southeast was a net exporter of pulpwood, with softwood and hardwood exports exceeding imports by 141,933 cords. Softwood exports exceeded imports by 38,857 cords, while hardwood exports exceeded imports by 103,076 cords. Across the South roundwood pulpwood receipts, or consumption, exceeded production by 36,566 cords.

Mills and Pulping Capacity

In 2009, 83 southern pulp mills were operating and drawing wood from the 13 Southern States, three less than in 2008 (fig. 7). The International Paper mill in Bastrop, Louisiana,

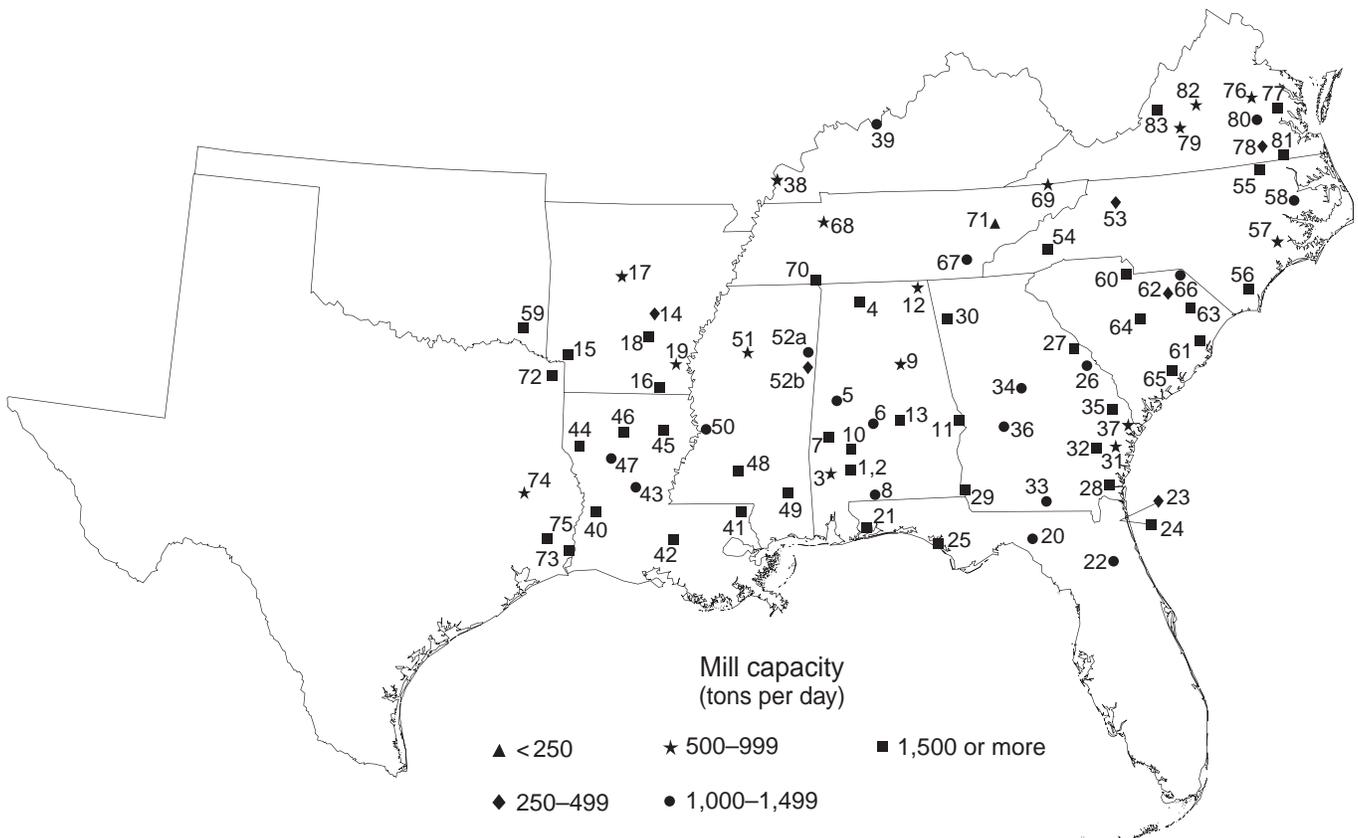

Figure 7—Capacity of southern pulp mills operating and drawing wood from the 13 Southern States, 2009. Numerals are coded on Table A.22.

the Alabama River newsprint mill in Clairborne, Alabama, and the Georgia Pacific mill in Pryor, Oklahoma closed in 2008. At the same time, total southern mill pulping capacity decreased from 124,679 tons per day in 2008 to 123,368 tons per day in 2009. Daily capacity of individual mills ranged from 125 tons to 3,162 tons. In 1979, 117 mills were operating in the South, where the average pulpmill capacity was 948 tons per day. By 1997, a peak year for pulpwood production in the South, the number of operating pulpmills in the South had declined to 103, but average pulping capacity had increased to 1,361 tons per day. In 2009, the average daily capacity was 1,486 tons per day, 36 tons per day higher than in 2008 and 125 tons per day higher than in 1997.

Many companies operate pulping facilities throughout the South. In 2009, International Paper Company was the dominant pulp and paper company, with 17 pulpmills in 10 Southern States responsible for 27 percent of the South's pulping capacity. Georgia-Pacific Corporation operated 10 pulpmills in seven States and accounted for 14 percent of the South's pulping capacity. Smurfit-Stone Container Corporation operated seven pulpmills in five States and accounted for 8 percent of the South's pulping capacity. With > 60,542 tons of pulping capacity, these three companies were responsible for 49 percent of the South's pulping capacity. Domtar Paper Co., LLC, Temple-Inland, Inc., AbitibiBowater, Inc., Weyerhaeuser Company, and MeadWestvaco Corporation operated six, five, four, four, and three mills, respectively, and accounted for another 24 percent of the South's pulping capacity.

The sulfate process dominated the industry in 2009, accounting for 89 percent of mill capacity. Groundwood or other mechanical processes accounted for 5 percent, semichemical 5 percent, and soda and other chemical processes 1 percent (table A.22). These capacities have remained relatively stable over the past few years. Based on 2009 production and mill capacity, and using an average of 350 total operating days, southern pulpmills operated at 89-percent capacity.

Alabama and Georgia continued to lead the South in the number of operating mills, with 13 and 12 mills, respectively. Georgia led in pulping capacity, with 20,712 tons per day and Alabama followed, with 20,653 tons per day (table 3). These two States accounted for 34 percent of the South's pulping capacity. In addition, three pulpmills outside the Southern region drew wood from the South in 2009 (table A.23).

Table 3—Number of pulpmills and pulping capacity, by State, 2009

State	Mills	24-hour capacity
	<i>number</i>	<i>tons</i>
Alabama	13	20,653

Texas	4	5,883
Virginia	8	9,295
Total	83	123,368

Trends

Figure 8 depicts Southern pulpwood production from 1953 to 2009. The 9-percent decline registered between 2008 and 2009 is one of the largest drops recorded since data collection began; second only to the 14-percent decline recorded between 1974 and 1975. Softwood roundwood expressed as a percent of total production declined significantly from 1953 until the mid-1980s. In 1953, softwood roundwood supplied 87 percent of the total pulpwood production. By 1985 it made up only 44 percent of total production and remained relatively stable until 2002. Since then softwood roundwood has made up an increasingly larger share of total pulpwood production. Although softwood roundwood was down 3 percent in 2009, it accounted for 56 percent of total pulpwood production.

In contrast, hardwood roundwood as a proportion of total pulpwood production was only 12 percent in 1953 and steadily increased until 1997 when it accounted for 27 percent of total production. Since then the hardwood roundwood component has steadily declined. In 2009, with a 9-percent decline in hardwood roundwood production recorded it only accounted for 20 percent of total pulpwood production.

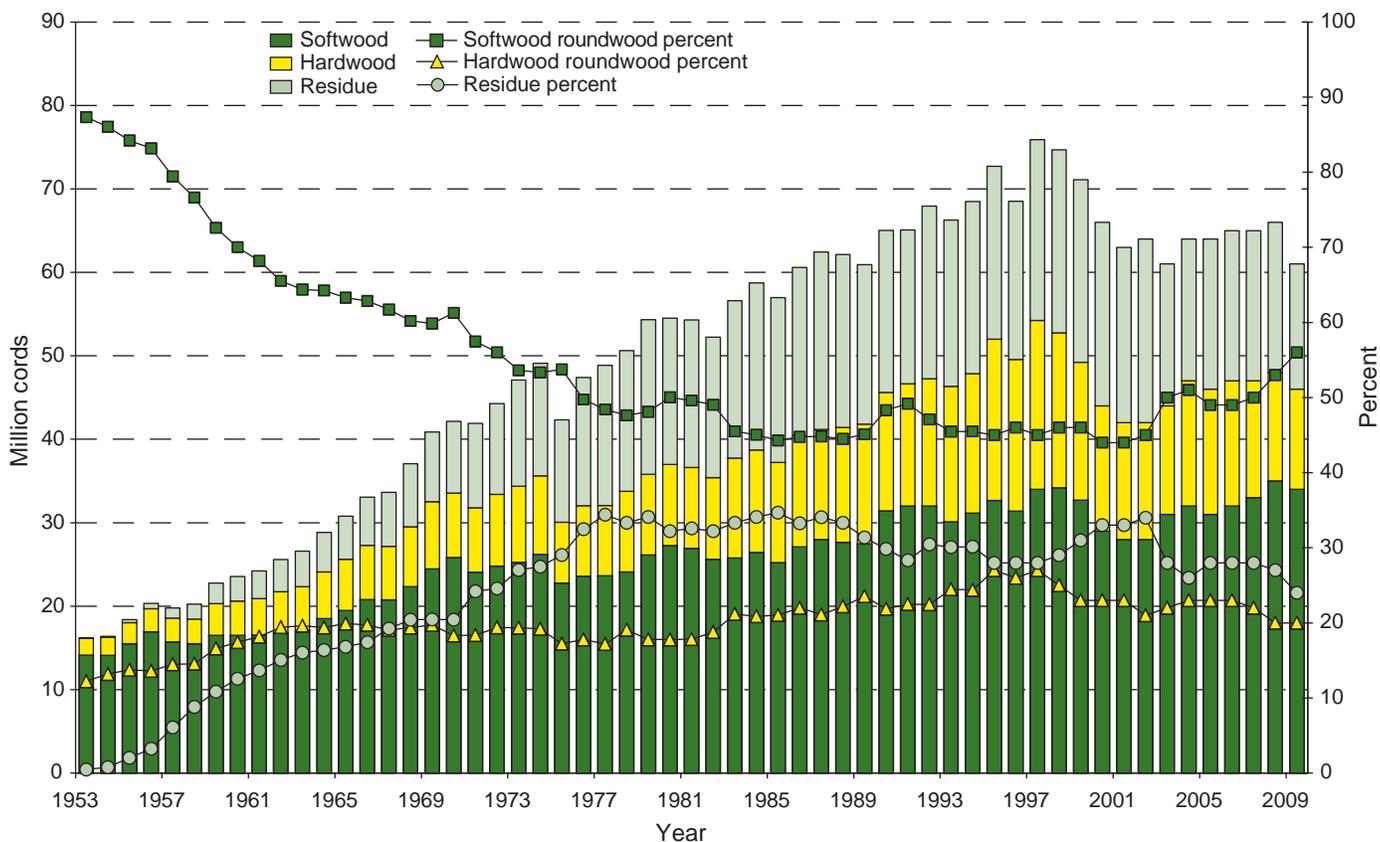

Figure 8—Pulpwood production in the South, 1953–2009.

The production and use of wood residues in the South has taken much the same track as hardwood production. In 1953, wood residue was not recorded as being used for pulpwood production. The production and use of wood residue increased steadily until 1985 when it accounted for 35 percent of total pulpwood production. Since then the proportion of wood

residue has declined. Although wood residues are still an important source of fiber for the pulp and paper industry in the South, the 20-percent decline in wood residue production in 2009 has reduced the proportion of wood residues to 24 percent of total pulpwood production.

Johnson, Tony G.; Steppleton, Carolyn D. 2011. Southern pulpwood production, 2009. Resour. Bull. SRS-168. Asheville, NC: U.S. Department of Agriculture Forest Service, Southern Research Station. 38 p.

The South's production of pulpwood declined from 67.0 million cords in 2008 to 61.2 million cords in 2009. Roundwood production declined by 2.3 million cords to 46.5 million cords and accounted for 76 percent of the South's total pulpwood production. The use of wood residue dropped 3.6 million cords from 18.2 million cords in 2008 to 14.6 million cords in 2009. Georgia and Alabama led the South in total production, with 10.0 and 9.4 million cords, respectively. In 2009, 83 mills were operating and drawing wood from the 13 Southern States. Pulping capacity of southern mills increased from 124,679 tons per day in 2008 to 123,368 tons per day in 2009.

Keywords: FIA, pulping capacity, pulpmills, pulpwood, residues, roundwood.

The Forest Service, U.S. Department of Agriculture (USDA), is dedicated to the principle of multiple use management of the Nation's forest resources for sustained yields of wood, water, forage, wildlife, and recreation. Through forestry research, cooperation with the States and private forest owners, and management of the National Forests and National Grasslands, it strives—as directed by Congress—to provide increasingly greater service to a growing Nation.

The USDA prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, SW, Washington, DC 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.
