

Midsouth Pulpwood Prices, 1992

Patrick E. Miller

SUMMARY

The average price in the Midsouth for a cord of roundwood pulpwood increased 5.1 percent from \$56.39 in 1991 to \$59.29 in 1992. The average delivered price for a green ton of chipped residues was \$27.30, an increase of 6.1 percent. In 1992, expenditures for Midsouth pulpwood increased 14.0 percent to \$2.2 million. Real prices continued to rise for both softwood and hardwood from 1991 to 1992.

Keywords: Chipped residues, expenditure, pulp mills, roundwood.

Midsouth pulpwood prices for 1992 are based on information supplied by an annual canvass of all wood-using pulp mills. Out of a total of 55 mills, 41 mills, accounting for more than 61.3 percent of the pulpwood receipts in the region, responded to the 1992 survey. All reported prices are for deliveries to the pulpmill, mechanized yard, or rail car. Freight, woodyard, overhead, and similar expenses were not included. Prices are for standard units of measurement—cords for roundwood and green tons for wood residues. When necessary, prices from pulp mills reporting in nonstandard units were converted to prices from standard units using regional conversions.

The average price for roundwood pulpwood increased by 5.1 percent to \$59.29. Softwood and hardwood roundwood prices increased 4.4 and 10.3 percent, respectively, with \$60.82 being paid for softwood and \$55.67 for hardwood (table 1). The increase in the average price for hardwood was the largest since 1979. Hardwood prices will eventually equal or exceed softwood prices if this trend continues. As long as hardwood prices remain lower than those of softwood, there will be greater incentives for pulp mills to

use the hardwood due to the availability of the fiber and lower prices.

The average price for chipped residues in the Midsouth was \$27.30, an increase of 6.1 percent since 1991 (table 2). Softwood and hardwood chips increased to \$28.39 and \$23.26 per green ton from 1991 prices of \$26.52 and \$21.01, respectively. The average price of hardwood residues increased substantially in 1992 by 10.7 percent, while that of softwood residues increased by only 7.0 percent.

As presented in tables 1 and 2, pulpwood prices have generally risen since 1983. But, when the effects of inflation are taken into account, real pulpwood prices, in terms of 1983 dollars, have decreased (table 3). Only hardwood roundwood had a 1992 real price as high as in 1983. Between 1983 and 1992, softwood roundwood real prices decreased 20.5 percent to \$44.01. Softwood and hardwood chip real prices decreased 19.1 and 11.5 percent to \$47.24 and \$38.71, respectively, during the 10-year period.

After 1991, the average prices for truck delivery increased. In 1992, delivery of softwood was less expensive by rail when compared to delivery by truck. The average price for hardwood roundwood delivered by truck climbed by 11.3 percent to \$55.83, and the price for hardwood chips increased by 11.4 percent to \$23.21 (table 4). Prices for softwood and hardwood roundwood delivered by rail fell by 2.9 and 7.3 percent, respectively, while the prices for softwood and hardwood chips increased by 2.6 and 4.6 percent to \$23.85 and \$24.76, respectively (table 5).

Total Midsouth pulpwood expenditures rose by 14 percent to \$2.2 million in 1992. This increase can be attributed to an increase in prices and pulpwood production. Expenditures for softwood pulpwood accounted for 69.4 percent of the total. Roundwood accounted for 65.4 percent of the expenditures for pulpwood, whereas chipped residues accounted for

Table 1.—Trends in average price per cord for Midsouth roundwood, 1983 to 1992

Year	All species	Softwood	Hardwood

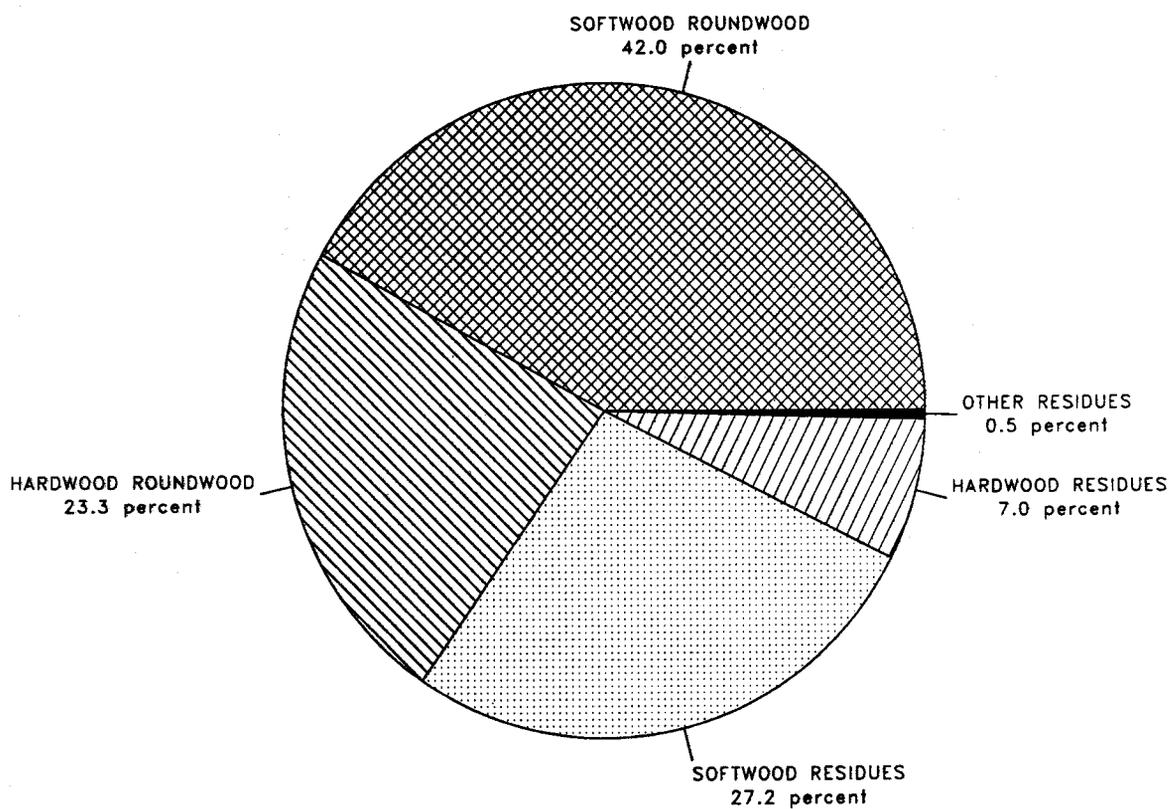

Figure 1.—Expenditure for wood fiber by type (percentage of total expenditure).

34.1 percent. Softwood roundwood receipts contributed 42.0 percent of the total expenditure for pulpwood, and hardwood roundwood contributed 23.3 percent (fig.1).

Average pulpwood prices for roundwood was higher in Tennessee than in any other Midsouth State. Oklahoma and Texas combined had the highest average price for chipped residues of \$30.77 (table 6). Chipped residues were least expensive in Tennessee at \$20.74. In 1992, all States had average price increases for roundwood except Oklahoma and Texas. Chips were more expensive than in 1991 in all States except Oklahoma, Tennessee, and Texas.

TRENDS

From 1983 to 1992, the average price for roundwood increased by 22.6 percent, with the largest increase of 38.9 percent for hardwood roundwood. Since 1983, the average price for chipped residues increased by 17.0 percent. Hardwood residues increased remarkably by 24.0 percent, while softwood residues increased 16.0 percent. Overall, hardwood prices over the last 10 years have climbed significantly.
