Subject: Aquatic Organism Passage, GIS product

To: Michael Joyce, Fish Biologist, Region 8, Chattahoochee-Oconee National Forest

The Chattahoochee-Oconee National Forest funded the Southern Research Station, Center for Aquatic Technology Transfer (CATT) to complete aquatic organism passage (AOP) inventories on the Chattahoochee National Forest in summer 2012.

The GIS and database products summarize the AOP inventory results for 99 sites visited by our crew. In total, crews visited 99 road-stream crossing sites and completed formal passage inventories at 35 sites.

The GIS product displays the location, site characteristics, and where applicable, the passage results for each road-stream crossing we visited. In addition, it contains hyperlinks to site photos for quick visual reference. The database product stores all of the data collected at each site visited. The attached instruction sheets provide additional details regarding the use of each product.

Please do not hesitate to contact me at 540-231-0078 if you have any questions regarding this project, or if you require additional AOP surveys. We look forward to working with you again soon.

Sincerely,

CRAIG N. ROGHAIR
FISHERY BIOLOGIST
