The Monongahela National Forest funded the Southern Research Station, Center for Aquatic Technology Transfer (CATT) in 2014 to complete aquatic organism passage (AOP) inventories on the Cheat-Potomac, Gauley, Greenbrier, and Marlinton-White Sulphur Ranger Districts. The field work portion of the project is complete and we are releasing products as they are completed. The enclosed file contains database and GIS products that summarize the AOP inventory results for the 36 sites visited by our crews in summer 2014.

The database product stores all of the data collected at each site we visited. The GIS product displays the location, site characteristics, and where applicable, the passage results for each road-stream crossing we visited. In addition, it contains hyperlinks to site photos for quick visual reference. The attached instruction sheet provides additional details regarding the use of each product.

Please do not hesitate to contact me at 540-250-0786 if you have any questions regarding this project, or if you require additional AOP surveys. We look forward to working with you again soon.

Sincerely,

COLIN KRAUSE  
Fish Biologist
