1961

1960's PULPWOOD HARVEST IN THE SOUTH reached an all-time high of 23,551,000 cords—57 percent of the Nation's total. At year's end, the South had 81 pulpmills with a total daily capacity of more than 50,000 tons. Seven mills outside the South also were using wood grown within the region.

All together, southern States produced 4 percent more pulpwood in 1960 than in the previous record year of 1959. Changes in State harvests ranged from a 13-percent increase in South Carolina to a 3-percent decline in Oklahoma. Georgia produced 4.9 million cords, to continue as southern leader for the thirteenth consecutive year. Alabama harvested more than 3 million cords; three other States—North Carolina, South Carolina, and Florida—each cut more than 2 million.

Some 20,595,500 cords were delivered to mills as bolts. This was a 2-percent increase over 1959. More than 80 percent of the roundwood was pine, which went to 63 of the South's 81 mills.

Hardwood bolts totaled 4,104,600 cords. This volume was 9 percent above that of 1959 and set a new record for the tenth straight year. One-fifth of the total roundwood volume was hardwood. More than 71 percent of the hardwood came from soft-textured species such as sweetgum and yellow-poplar.

[1] Includes gums, cottonwood, willow, yellow-poplar, bay, magnolia, maples, basswood, sycamore, soft elm, hackberry.

Pine bolts were cut in 775 of the 927 southern counties; 172 counties showed an increase of 30 percent or more over their 1959 output. Hardwood cordage was produced in 723 counties, of which 321 marketed at least 30 percent more wood than in the previous year.

Nearly three-fourths of the roundwood was pulped in the State in which it was grown. Some 91 percent of Louisiana's harvest was used by in-State mills, the highest proportion

for any southern State. Less than 1 percent of all cordage was shipped out of the South.

Over 12 percent of the pulp industry's total wood supply was in the form of chips produced by other forest industries; in 1959 the proportion was 10 percent. The 1960 chip volume was 2,877,300 cords, an increase of 21 percent over the preceding year. As in the past, sawmills provided the great bulk of the chips, but 78,200 cords arrived at pulpmills as unchipped residues of veneer mills and wood preserving plants.

At least 896 sawmills, veneer mills, and other forest industries are currently equipped with chip-making machinery. Georgia leads the South here also, with 163 chipping installations; North Carolina is second with 147; Alabama ranks third with 141.

Pulping capacity in the South continues to rise. During the year total mill capabilities increased from 46,000 tons of pulp per day to 50,00 tons. Six new mills are planned or under construction.

Florida leads the States in pulping capacity with 17 percent of the South's total. Georgia ranks second and Louisiana a distant third.

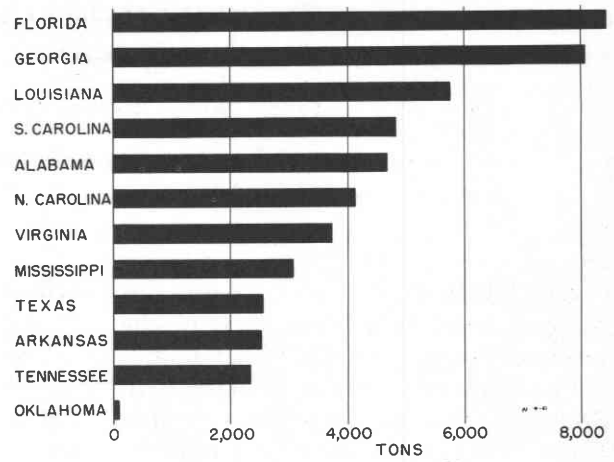

Figure 1. *Pulping capacity by State, 1960.*

The kraft or sulfate process, used at 52 mills, accounts for 76 percent of the region's daily capacity; 12 percent is in groundwood and other mechanical methods, and 10 percent in the semi-chemical process. Three mills with 2 percent of the capabilities employ the soda and sulfite process. Recent trends indicate that, although many mills are diversifying manufacturing methods, the sulfate process will probably continue to predominate for many years.
