# Southern Pulpwood Production, 1978

*DANIEL F. BERTELSON*

Total southern pulpwood production in 1978 amounted to a record-setting 50.6 million cords (table 1). This is an increase of 1.8 million cords, or 4 percent more than the previous year. It also is 1.5 million cords over the 1974 record output. Hardwood roundwood accounted for 72 percent of the increase and softwood roundwood added another 25 percent to the total gain.

Table 1.--Pulpwood production in the South during 1978, and change from 1977

| State | Pulpwood | Change |

[1] Less than 0.5 percent decrease

Pulpwood production increased in 8 of the 12 Southern States. Georgia had the largest gain—543,000 cords, while Arkansas output rose more than 449,000 cords. South Carolina's output decreased by 115,000 cords. Arkansas, Florida, Georgia, North Carolina, and Texas all set new highs for total pulpwood production. The top three pulpwood-producing states in the South have remained the same for the past 11 years: Georgia is first, followed by Alabama and Mississippi.

Roundwood production of almost 34 million cords was a 5 percent increase over 1977 (tables 2 and 3). Ten of the Southern States showed a gain. Arkansas, Oklahoma, and Texas set new State records for round pulpwood production. Louisiana had the largest softwood gain with an increase of 339,000 cords, while Alabama rose 321,000 cords for the largest hardwood increase. Alabama also had the largest loss in softwood output, while all States recorded increases in hardwood volumes.

Softwood roundwood production increased 2 percent, while hardwood production rose 15 percent or 1.3 million cords. Softwoods now account for about 71 percent of the roundwood harvest, down 3 percent from previous years. Of the hardwood production, 45 percent was oak, 21 percent gums, and 34 percent other species.

In 1978, five counties in the South produced more than 200,000 cords of round pulpwood. Ashley County, Ark. led with 240,955 cords, followed by Craven County, N.C., with 229,496 cords. The number of counties or parishes with roundwood production of more than 100,000 cords rose from 67 in 1977 to 82 in 1978 (tables 7-18). Alabama led the South with 17 counties, followed by Louisiana and Texas with 13 apiece. Production of softwood roundwood exceeded 100,000 cords in 38 counties, while the hardwood harvest surpassed 100,000 cords in three counties.

The 16.9 million cords of wood residues used for pulp was a record high, but the increase was less than 1 percent above the previous year (table 4). The use of residues accounted for 33 percent of the total pulpwood production. Softwood residue use was down 1 percent, while hardwoods increased by 7 percent. Softwood residue production decreased in eight of the Southern States, while hardwood production increased in seven States. New highs for total residue production were reached in Alabama, Arkansas, Georgia, and Mississippi.

Southern pulping capacity in 1978 rose more than 2 percent to 103,130 tons per day (table 19). The number of mills in the South remained the same at 113, as one new mill in Alabama came on stream and one mill, also in Alabama, ceased operation. In addition, 12 mills outside the South used southern pulpwood, primarily plant byproducts (table 20). Two mills, one in Georgia and one in Virginia, were under construction at the end of the year (table 21).
