# SELECTED BIBLIOGRAPHY ON SOUTHERN RANGE MANAGEMENT

R.S. Campbell<sup>1</sup>, L. K. Halls<sup>1</sup> and H. P. Morgan<sup>2</sup>  
*Committee on Range Bibliography of Southern Section,  
American Society of Range Management*

The purpose of this bibliography is to list important publications relating directly to southern ranges, the domestic livestock and wildlife produced thereon, and the management of these lands, livestock, and wildlife. Range is defined as natural grassland, savannah, or forest that supports native grasses, forbs, or shrubs suitable as forage for livestock and game. Land under cultivation or in improved pasture is excluded.

The southern region is considered to include all of the States from Virginia to Arkansas and Louisiana, the southern portions of Kentucky and Missouri, and the eastern portions of Texas and Oklahoma. The compilers have attempted to list the publications most helpful to range workers and students. Reports on outstanding work in other regions are included if applicable to the southern range. Abstracts, brief general notes, indefinite preliminary reports, and obsolete bulletins generally are excluded. The lists extend through 1961 but include certain important publications through August 1962.

Each publication is listed only once, but cross-references are suggested at the end of some sections. Publications covering more than one subject are under the topic of primary importance to range management. The classification system and the section definitions are based on those in *A Selected Bibliography on Management of Western Ranges, Livestock, and Wildlife*, Miscellaneous Publication 281 of the U.S. Department of Agriculture, 1938.

Sources consulted include books, periodicals, publications of the U.S. Government and State agricultural experiment stations, and other State and regional releases. The periodicals listed below were scanned in their entirety, except for a few old volumes not in libraries accessible to the committee:
