

# Timber Product Output and Use Oklahoma, 2017

Oklahoma forests accounted for a total of 103,962 thousand cubic feet (MCF) of timber products while the forest products industry produced a total of 134,312 MCF within the State.

This resource update contains the findings of a canvass of all primary wood-using plants in Oklahoma. It complements the Forest Inventory and Analysis (FIA) annual inventory of volume and removals. The canvass was conducted to determine the amount and source of wood receipts and annual timber product imports/exports. Only primary wood-using mills were canvassed. Primary mills are those that process roundwood in log or bolt form or as chipped roundwood. Examples of industrial roundwood products are saw logs, pulpwood, veneer logs, poles, and logs used for composite board products. Mills producing products from residues generated at primary and secondary processors were not canvassed. Data used in this update were accessed from the FIA Timber Product Output database (see back page).

- Softwood

**Oklahoma had a total production of 103,962 MCF in 2017.**

**There are about 17 primary wood processing mills accounting for production in the State.**

Statewide roundwood production (% of total) by product

Miscellaneous	58.06%	<span style="color: #4DB6AC;">■</span>
Saw logs	36.97%	<span style="color: #3949AB;">■</span>
Poles/Posts/Pilings	4.97%	<span style="color: #8D6E63;">■</span>

Oklahoma imported 44,223 MCF into the State and exported 13,873 MCF out of the State making them a net importer of roundwood.

Total roundwood production over time

■ Hardwood ■ Softwood
