Timber Product Output and Use
Oklahoma, 2019

Oklahoma forests accounted for a total of 105,656 thousand cubic feet (MCF) of timber products while the forest products industry produced a total of 132,900 MCF within the State.

This resource update contains the findings of a canvass of all primary wood-using plants in Oklahoma. It complements the Forest Inventory and Analysis (FIA) annual inventory of volume and removals. The canvass was conducted to determine the amount and source of wood receipts and annual timber product imports/exports. Only primary wood-using mills were canvassed. Primary mills are those that process roundwood in log or bolt form or as chipped roundwood. Examples of industrial roundwood products are saw logs, pulpwod, veneer logs, poles, and logs used for composite board products. Mills producing products from residues generated at primary and secondary processors were not canvassed. Data used in this update were accessed from the FIA Timber Product Output database (see back page).

Oklahoma had a total production of 105,656 MCF in 2019.

There are about 14 primary wood processing mills accounting for production in the State.

Statewide roundwood production (% of total) by product

- Miscellaneous: 64.02%
- Saw logs: 32.44%
- Poles/Posts/Pilings: 3.54%

Oklahoma imported 41,030 MCF into the State and exported 13,787 MCF out of the State making them a net importer of roundwood.

Total roundwood production over time

- Hardwood
- Softwood

Additional Resources
The application that produced this resource update was developed using data from the USDA Forest Service Forest Inventory and Analysis TPO database: https://public.tableau.com/views/TPOREPORTINGTOOL/MakeSelection?:showVizHome=no

Timber Product Output
The National Timber Product Output (TPO) section of the FIA program collects and reports estimates of industrial and nonindustrial uses of roundwood. Details of the TPO section and TPO data can be found here: https://www.fia.fs.fed.us/program-features/tpo/
