Chapter 1: Introduction

This report is one of a series that describes the results of the 1994-95 National Survey on Recreation and the Environment (NSRE). The emphasis here is on recreation activities for which public land management agencies supply various outdoor recreation opportunities in the United States. The specific orientation of this report is toward the Bureau of Land Management (BLM) and four western regions within the 11 states.

It is amazing to see how important recreation has become and predicting demands for recreation has become increasingly difficult. In the past 13 years, the number of participants in most outdoor recreation activities has increased, placing greater demands on existing recreation resources. In addition to the increase in the total number of participants, the client base is changing as well. Because of this, recreation resource managers are faced with increasingly difficult challenges of satisfying user demands.

Survey Methods

The 1994-95 NSRE was conducted to discover and describe: (1) participation by Americans in outdoor recreation activities, (2) favorite activities and constraints on participation in those activities, (3) uses and values of wildlife and wilderness, (4) attitudes about recreation policy issues, (5) outdoor recreation patterns and needs of people with challenging and disabling conditions, and (6) recreational trips people take away from home. NSRE data will be used by a variety of public and private organizations for various purposes. The emphasis in this report is on the regional and demographic usage patterns across various outdoor recreation activities throughout the United States and the BLM western regions. This report will therefore assist public land management agencies in the provision of corresponding recreation opportunities, services, and facilities.

The NSRE survey was comprised of two random-digit-dialing (RDD) telephone surveys. In the first survey, a sample of 12,000 Americans above the age of 15 were targeted and people were asked questions in four areas: (1) participation in activities and the numbers of days and trips spent in recreation activities, (2) the characteristics of recreation trips, (3) barriers and constraints to outdoor recreation, and (4) alternative strategies for charging user fees for recreation. The average length of interviews for this survey was 20 minutes.

In the second survey, a sample of 5,000 Americans above age 15 was targeted. People were asked about their participation in specific outdoor recreation activities and the benefits of that participation. Each respondent was also asked questions in three of five additional randomly assigned modules: (1) favorite activities and barriers and constraints to participation in them, (2) wilderness issues, (3) wildlife issues, (4) awareness about public land management agencies, and (5) freshwater-based trips. For each of the randomly assigned modules, sample size was approximately 2,500.

In both surveys, respondents were asked if they had a disability or challenging physical

condition. If the answer was "yes," additional questions about accessibility of recreation areas were asked. If respondents indicated that a disabled person other than themselves lived in the home, the disabled person was contacted and interviewed at a convenient date.

Data were collected from January 1994 through May 1995. A total of 17,216 interviews were completed–12,214 for survey one and 5,002 for survey two. One goal of the first survey was to have valid samples in each of eight regions in the United States. A minimum sample size of 900 was set for regions 1 through 7 and a minimum of 400 samples was set for Alaska. The Nation's population is heavily concentrated in the Northeast and the South, so individuals in these regions were proportionately under represented in the first survey. Samples for the second survey were based on population distribution, so almost 47 percent of the samples were in the Northeast and more than 30 percent were in the South.

Sources of Error

State-by-state random digit dialing was employed to sample households across the country. This approach, however, reaches a random sample of telephone numbers, rather than of people. Affluent families are virtually certain to have a telephone number and many have more than one. At the other end of the affluency scale, many low-income households may not have a telephone. As a result, affluent people may have been over-represented somewhat in the survey sample. Demographic characteristics of the NSRE sample are compared with 1990 Census estimates for individuals 16 and above in Table 1.1. Differences in age, race, and gender were adjusted for over- or under-representation during data analysis.

Table 1.1–Comparison of the NSRE survey sample with 1990 Census of Population Estimates.

Category	NSRE Proportion of Sample	1990 Census of Population Proportion
AGE		
16-24	15.1	17.2
25-29	9.0	11.1
30-39	23.9	22.0
40-49	19.6	16.5
50-59	12.8	11.5
over 60	19.5	21.8
RACE		
Caucasian	85.3	81.9
African-American	6.3	11.1
American Indian	1.0	0.73
Asian Pacific Islander	1.5	2.8
Other	5.9	3.4
GENDER		
Male	42.6	48.0
Female	57.4	52.0

In viewing the results presented in this report, it is important to remember that individuals were asked about their personal participation in specific recreation activities. But they were also asked about the characteristics of their households. Thus, when we report the relationship of family size to rate of participation, the percentages given represent the proportions of respondents in various sizes of households who participated in specific activities.

Activities, Singly and In Groups

Questions were asked about participation in 68 specific outdoor recreation activities. For some of these activities, there is a subset of

more specific types of that type of activity. For instance, cross-country skiing is one of the 68 activities, however, participants were also asked what type of cross-country skiing they participated in (i.e., skiing on groomed vs. ungroomed trails, back country skiing, etc.).

For analysis and description of results, it was useful to place these activities into 13 groups, or activity headings. Numbers that describe participation in major activity headings may include participants in activities not specifically listed under that heading. For instance, the heading "Outdoor team sport activities" may include more than the seven activities specifically listed.

For simplicity, each activity was placed in only one category. In many cases, however, activities could have been placed in more than one category. Bicycling, for example, was classed as a fitness activity, which it is for many people. For others, however, bicycling might best be classed as an outdoor adventure activity.

Percentages in the tables were obtained using the results of the 1994-95 NSRE. Number of participants in the tables are based on those percentages and U.S. Census estimates of the number of persons in the country 16 years or older for the survey period, winter 1994 through spring 1995.

The activity groups and the individual activities surveyed were:

Fitness
- Running/jogging
- Bicycling
- Long distance biking
- Walking

Individual sports
- Golf
- Tennis

Outdoor team sports
- Baseball
- Softball
- Football
- Basketball
- Soccer
- Volleyball
- Handball

Outdoor spectator activities
- Concerts
- Sporting events

Viewing or studying
- Nature centers
- Visitor centers
- Prehistoric sites
- Historic site
- Bird watching
- Wildlife viewing
- Fish viewing
- Other wildlife viewing
- Sightseeing
- Visiting a beach or waterside
- Nature study near water

Snow and ice activities
- Ice skating
- Snowboarding
- Sledding
- Downhill skiing
- Cross-country skiing
- Cross-country skiing/groomed trails
- Cross-country skiing/ungroomed trails
- Backcountry cross-country skiing
- Snowmobiling

Camping
- Developed area
- RV developed camping
- Tent developed camping
- Primitive area
- RV primitive camping
- Tent primitive camping
- Other camping

Hunting
- Big game
- Small game
- Migratory bird

Fishing
- Freshwater
- Saltwater
- Warmwater
- Coldwater
- Ice
- Anadromous
- Catch and release

Boating
- Sailing
- Canoeing
- Closed-top canoeing
- Open-top canoeing
- Kayaking
- Rowing
- Floating, rafting
- Motorboating
- Water skiing
- Jet skiing
- Sailboarding/windsurfing

Swimming
- Surfing
- Swimming/pool
- Swimming/lake, river, ocean
- Snorkeling/scuba

Outdoor adventure
- Hiking
- Hiking to a summit
- Orienteering
- Backpacking
- Backpacking to a summit
- Mountain climbing
- Rock climbing
- Caving
- Off-road vehicle driving
- Horseback riding
- Horseback riding on trails

Traditional social activities
- Yard games
- Picnicking
- Family gathering

Chapter 2: Outdoor Recreation Participation

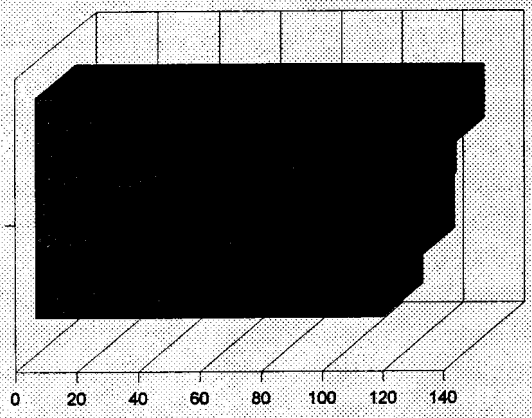

Figure 2.1–The four most popular outdoor recreation activities.

Survey results show that 94.5 percent of Americans 16 years of age or older participated in at least one of the surveyed forms of outdoor recreation in 1994.

A rising national population along with rises in rates of participation translate into growing markets for most outdoor recreation

Almost 95 Percent of Americans Participate

Survey results show that 94.5 percent of Americans 16 years of age or older participated in at least one of the surveyed forms of outdoor recreation in the 12 months prior to being interviewed. That is almost 19 out of 20 people and approximately 189 million participants nationwide. Whether these activities were done for health reasons, as part of a vacation, as daily stress relief, or just for fun, it is apparent that demand for outdoor recreation is high. Percentages of interviewees who reported participation and estimates of numbers of participants over age 15 are shown in the table at the end of this Chapter.

Some activities, such as walking, do not require a specific setting. However, most activities either require or are enhanced by a particular environment or specific facilities. While private industry attempts to find a way to capitalize on the growing market of outdoor recreation, public agencies already have the basic resources necessary to provide for the public demand in this area. The most essential resource is, of course, land. Government agencies are responsible for much of the land that is available for outdoor recreation activities. While most agencies do have resource oriented responsibilities other than recreation, it is viewed as important to respond to public demands for recreational use of public lands.

Results from the NSRE show that there are four activities in which over half of the population over the age of 15 participated in the year prior to the interview. Walking is the most popular single activity, with about 134 million participants. Visiting a beach or other waterside and gathering outdoors with family and friends each have about 124 million participants 16 and older; sightseeing has 113 million such participants (Fig. 2.1). The high demand for such activities and the environments conducive to their enjoyment could certainly be met in part by agencies that manage land, forest, and water resources.

It is not surprising that so many report walking as an outdoor activity. Walking does not require a specific setting, it is inexpensive, and is the exercise most frequently recommended by physicians. For older people, in particular, it is healthful and can be done at one's own pace. With the number of people in their 70's and older increasing rapidly in the United States, one can easily picture the popularity of outdoor walking continuing to rise. Opportunities to serve walkers include supplying safe, attractive trails.

Visiting a beach has long been a favorite way to spend a few hours, a whole day, or a vacation. The activity is supported by providers (many of them public) of attractive beaches, accommodations, food services, and entertainment.

Since many people do not have the space to host large family gatherings indoors, the popularity of holding large gatherings outdoors may well increase. Public parks and forests are oftentimes available for this activity. Due to the popularity of walking, visiting a beach, and gathering with family members, public land management agencies may want to incorporate facilities for all three activities in key locations. This will ensure maximum amounts of enjoyment for a large segment of the population.

Sightseeing, of course, covers a wide range of sites and attractions. The unique, natural sites that often justify a long trip are largely concentrated on public land. Tourism and travel services and facilities that make sightseeing more enjoyable are on the rise. It is difficult to picture the popularity of sightseeing as a base activity of tourism decreasing when numbers of retired people are increasing. Associated with the potential increase in the popularity of sightseeing is the potential degradation of the resource base, which will need to be addressed by the agencies responsible for their management.

Among overall activity headings, viewing activities were shown to be the outdoor pursuits that people participated in the most. Over three-quarters of the population 16 years and older (153 million people) said they participated in this type of activity at least once in 1994-95. Other major activity headings with over 100 million participants include fitness activities (137 million), social activities (136 million), outdoor spectator activities (118 million), and swimming activities (109 million). Public agencies who manage land and water resources can certainly play a major role in providing an environment for these immensely popular forms of outdoor recreation.

Traditional Outdoor Activities Typically Occurring on Public Lands Remain Popular

The forms of outdoor recreation mentioned above probably owe some of their popularity to their relatively low cost, close proximity to urban centers, and wide range of possible settings. A person need not spend a great deal of money or travel far to take a walk or go sightseeing. Other activities that are a little less popular are of special interest to public land managers because many of the specific settings for these activities are located in our parks, forests, and state recreation areas.

A second tier of activities (those that attract 25 to 99 million participants per year) are shown in fig. 2.2. This list contains many activities including hiking, camping, attending various forms of interpretive/visitor centers, boating, fishing, and so on.

Many of these activities have a low impact on the resource base and require minimal management. In the case of the more management intensive activities, a nominal fee could help offset costs and protect the resource.

Picnicking, the most popular of these activities (98 million participants), and enjoying yard games (74 million) are probably more closely associated with the first tier of activities. They are common, and can be done in a wide range of settings. Traditionally, sites for picnicking have been provided largely by public agencies and it is quite feasible for most land management agencies to provide facilities for picnicking. Yard games can be played in association

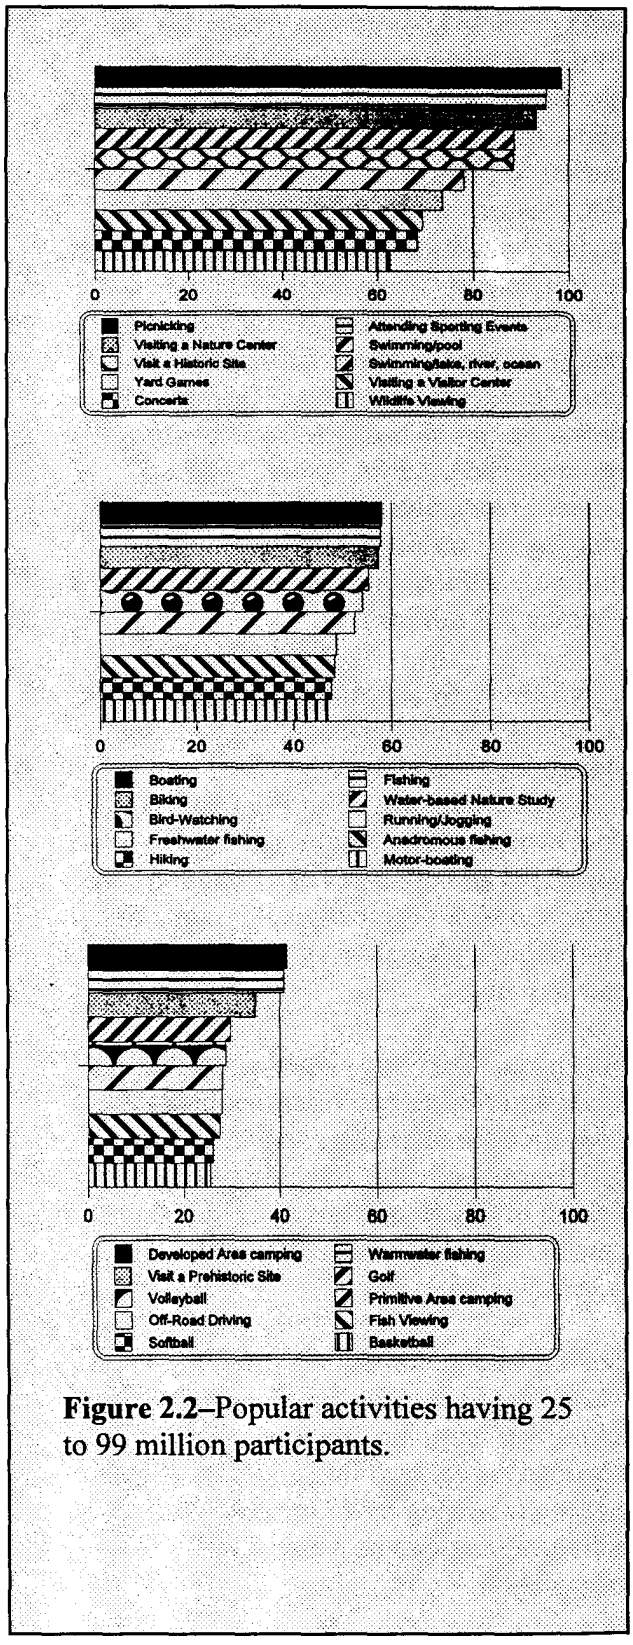

Figure 2.2–Popular activities having 25 to 99 million participants.

with picnicking or private residences. Some of the activities in this second tier are associated with satisfying people's curiosity about nature and things past. Attending various centers or sites is near the top of this list. Nature centers, historic sites, and visitor centers all draw more than 60 million visitors a year. Many of the facilities and sites for these activities are provided by public agencies. These facilities not only provide enjoyment in and of themselves, they often prove useful as an information resource and a starting point for other outdoor recreation activities, such as wildlife viewing (63 million), bird watching (54 million), and fish viewing and other wildlife viewing (27 million).

There are many activities in this group that occur only in a water-based setting. Pool swimming was enjoyed by 88 million Americans over age 15 in 1994, and non-pool swimming by 78 million. The popularity of both types of swimming has remained high in recent years. People find swimming a pleasant way to relieve tension and stay fit.

Fishing and studying nature near water are other water-based activities that provide relaxation for 58 million and 55 million people, respectively. Specific types of fishing in this second group include the pursuit of freshwater, anadromous, and warmwater species.

Boating and motorboating also fall into water-based activities that draw more than 25 million participants a year. General boating was enjoyed by 58 million people and motorboating by 47 million. These activities may also be enjoyed in conjunction with other outdoor recreation activities such as fishing or water skiing.

Land-based recreation activities that may or may not require specific settings include cycling and running/jogging. There were 57 million bicyclists over age 15 in 1994. Some cyclists enjoy the special challenges that mountain biking provides, while others enjoy cycling simply to get from one place to another. The popularity of running or jogging also has been growing. In 1994, 52 million people did a bit of running. The settings for this activity range widely from just around the neighborhood, to municipal parks, to long-distance wilderness trails. Regardless of the setting, however, the psychological as well as the physical benefits of running have undoubtedly contributed to the activity's rise in popularity.

The remaining activities in this group, hiking, developed area camping, and primitive area camping all require more specific settings generally provided by public agencies. Almost 48 million Americans over age 15 went hiking in 1994, 42 million went developed area camping, and 28 million camped in primitive areas. Hiking and primitive area camping have increased considerably in recent years, placing higher demands on existing trails and campgrounds. The recognition of these trends are necessary for land managers to reduce the impact on the resource base and mediate potential user conflicts.

Other outdoor recreation activities with more than 25 million participants include attending sporting events and concerts, golf, volleyball, off-road driving, softball, and basketball.

Specialized Activities

We have arbitrarily defined activities that attract less than 25 million participants nationwide per year as "specialized." We have assigned this term because many of the activities in this group not only require specialized settings, such as forest lands, but also specialized sporting equipment. Many kinds of activities are in this group (fig.2.3), and more undoubtedly could have been added. Many activities in this group represent new activities since the last National Recreation Survey in 1982-83, such as orienteering and rock climbing. However, traditional activities are also represented and include hunting, horseback riding, and downhill and cross-country skiing.

All of the outdoor recreation activities included in the survey represent enough people and interest to be considered important by land managers. Even windsurfing, the least popular of the listed activities, attracted more than 2 million participants a year. The demand for areas to pursue these activities does exist. Many times the popularity of an activity may be localized due to environmental or topographic conditions. Many participants will find that public land resources may be conducive to and convenient for these recreational pursuits. Again, government agencies are responsible for recognizing and reacting to public demands.

Many of the largest management and policy challenges for land managers are associated with the recognition of, and the reaction to, these specialized activities. These challenges can be attributed to the finite resource base coupled with increasing participants,

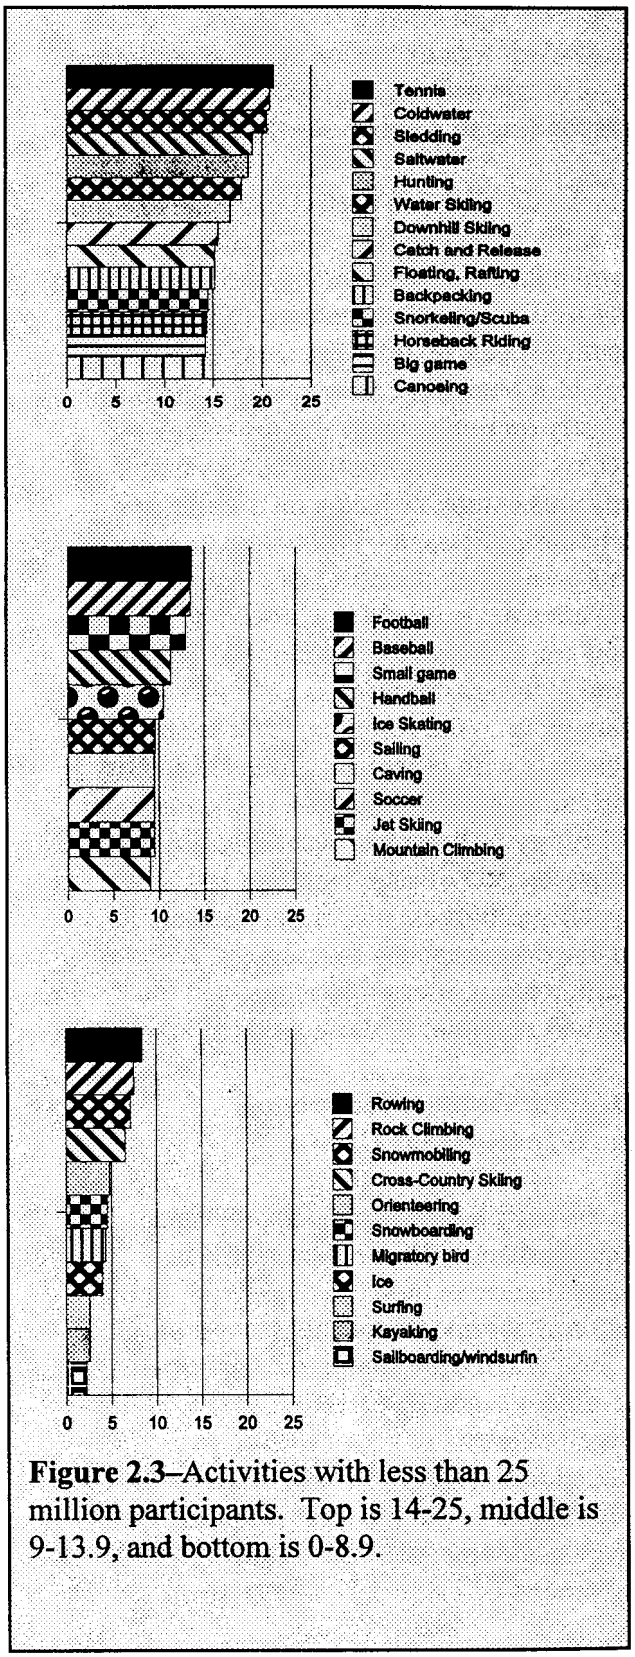

Figure 2.3–Activities with less than 25 million participants. Top is 14-25, middle is 9-13.9, and bottom is 0-8.9.

conflicts with other activities, the degradation or exclusion of other activities by a single activity, or just the challenge of responding to a brand-new activity.

Rock climbing is a perfect example of a very specific sport creating new challenges for land management agencies. An estimated 7.4 million people have tried rock climbing in the United States. The areas in which one can climb are extremely specific and occur mostly on public land, and the issue of access is often discussed. Rock climbing requires extensive hands-on training and reliable equipment. Technology has made this equipment possible, with recent advancements allowing climbers to tackle new routs in areas never climbed in before. And although climbing is generally not damaging to the resource, there are many conflicts with other user groups. Liability is also an important issue due to the potential for injury. Therefore, because of the above characteristic of rock climbing and other specific activities, it is important for a land management agency to know the extent of participation, user preferences, and the growth potential of these kinds of activities.

Overall, Outdoor Recreation Participation Has Grown

In the search for the most appropriate management policy, recent trends in participation in individual activities are extremely important. This section provides a look at changes in national participation levels for outdoor recreation activities that were measured in previous National Recreation Surveys (NRS). Thirty-one activities for which participation estimates were made in both 1982-83 and 1994-95, are compared in Table 2.1. The table shows the estimated number of participants for each survey period, as well as the percentage change in participation over the 12 year period. The percent change is indicative of the relative growth or decline in participation for a particular activity.

For 25 of the 31 activities included in both studies, there are millions more participants in the 1995 totals than there were in 1983. In addition to millions of new participants for traditional activities, there are participants for adventure activities that were rarely pursued 15 years ago such as orienteering and rock climbing.

Since 1982-83, many activities dramatically increased in popularity. Birdwatching had the largest increase, 155 percent, from 21 million to 54 million participants. Other activities with considerable growth include hiking (94 percent), backpacking (73 percent), downhill skiing (59 percent), primitive area camping (58 percent), and attending an outdoor concert (55 percent).

Between the 1982-83 NRS and the 1994-95 NSRE, the population of people 16 years and over grew by 13.4 percent from an estimated 176,653,000 in 1982 to 200,335,000 in 1995. Therefore, any activity with a percent change greater than 13.4 percent, reflects a growth in interest in these activities, as well as a growth in the number of participants. Highlighted in bold print in Table 2.1 are 23 of these 31 activities which grew faster than the overall population. This growth in interest may indicate future growth potential.

Activities which grew, but at a slower rate than the population growth rate include

bicycling (2 percent), and water skiing (13 percent).

Overall, the trend for outdoor recreation participation indicates continued growth in the demand of outdoor recreation opportunities, facilities, and services. Naturally, with an increase in total population, increases in participation for most activities would be expected. A percent change in participation above the rate of population growth indicates that a higher percentage of the public is participating in an activity. This is the case for most of the activities compared between the surveys. However, even participation growth less than the rate of overall population growth means more millions of participants. This growth will result in a greater demand for areas in which to recreate outdoors. Overall population growth, along with the increasing popularity of most outdoor recreation activities, will create problems and opportunities for land and water resource managers. A greater and changing demand is going to be placed on the public's natural resources through recreation. Managers need to anticipate and react to that growing demand.

Activities which showed a decline in the number of participants include tennis (-29 percent), hunting (-12 percent), horseback riding (-10 percent), sailing (-9 percent), fishing (-4 percent), and ice skating (-1 percent). In terms of natural resource oriented activities, the trend seems to be for some declines in participation in consumptive activities such as hunting, while non-consumptive activity participation seems to be on the rise.

Table 2.1–Percentages and millions of Americans who participated in outdoor recreation activities in 1982 and 1994. Only activities common to both surveys are shown.

Activity	Number in 1982-83 (millions)	Number in 1994-95 (millions)	Percent Change
Bicycling	56.5	57.4	+1.6
Horseback Riding	15.9	14.3	-10.1
Golf	**23.0**	**29.7**	**+29.1**
Tennis	30.0	21.2	-29.3
Outdoor Team Sports	**42.4**	**53.0**	**+25.0**
Boating	**49.5**	**58.1**	**+17.4**
Sailing	10.6	9.6	-9.4
Motorboating	**33.6**	**47.0**	**+39.9**
Water Skiing	15.9	17.9	+12.6
Swimming/pool	**76.0**	**88.5**	**+16.4**
Swimming/non-pool	**56.5**	**78.1**	**+38.2**
Fishing	60.1	57.8	-3.8
Hunting	21.2	18.6	-12.3
Hiking	**24.7**	**47.8**	**+93.5**
Walking	**93.6**	**133.7**	**+42.8**
Running/ Jogging	**45.9**	**52.5**	**+14.4**
Bird Watching	**21.2**	**54.1**	**+155.2**
Picnicking	**84.8**	**98.3**	**+15.9**
Sightseeing	**81.3**	**113.4**	**+39.5**
Off-Road Driving	**19.4**	**27.9**	**+43.8**
Ice Skating	10.6	10.5	-0.9
Downhill Skiing	**10.6**	**16.8**	**+58.5**
Cross-Country Skiing	**5.3**	**6.5**	**+22.6**
Snowmobiling	**5.3**	**7.1**	**+34.0**
Sledding	**17.7**	**20.5**	**+15.8**
Camping (overall)	**42.4**	**52.8**	**+24.5**
Developed Area	**30.0**	**41.5**	**+38.3**
Primitive Area	**17.7**	**28.0**	**+58.2**
Backpacking	**8.8**	**15.2**	**+72.7**
Attending a Sports Event	**70.7**	**95.2**	**+34.7**
Attending an Outdoor Concert or Play	**44.2**	**68.4**	**+54.7**

In addition to the number of participants, how often one participates in an activity is an important factor in recreation-based decision making. Some people participate in an activity only once or twice a year. Others,

enthusiasts, may participate once a week. To the managers and providers of outdoor recreational opportunities, the frequency of participation is probably more important than the simple fact that a person has done something once during the year. Table 2.2 was designed to roughly compare rates of participation in 1994-95 with those in 1982-83.

Study of Table 2.2 suggests that for people who engage in the listed activities, there has been relatively little change in amount and frequency of participation in the last 12 years. The strong similarities in responses to the two surveys strengthen our confidence in the accuracy of these surveys. They also suggest that there has been relatively little change in the ways in which people enjoy these natural resource-based activities.

Large numbers in the left column of table 2.2, which represents 1 or 2 days of activity, suggest that many people are trying the activity. Large percentages in the right column represent high percentages of participants with sufficient interest to pursue an activity for more than 25 days in a given year. Volumes of participation in the newly listed adventure activities are shown at the bottom of Table 2.2. Most of the people who engaged in these activities did not do so very often. Many apparently tried the activities once or twice a year. It remains unclear whether these participants will continue to pursue these activities occasionally or become avid enthusiasts. The 1994-95 totals for birdwatching and nature study differ markedly from those in 1982-83. In 1994-95, 48 percent spent only 1 or 2 days doing these things. In 1982-83, only 15 percent indicated such brief enjoyment, and 42 percent reported spending more than 25 days on these activities.

For agencies and organizations that provide opportunities for specific activities, changes in the two right columns (representing people who enjoy an activity for more than 10 days a year) are particularly important. People in those columns have participated frequently and are likely to continue to do so.

Table 2.2–Comparison of 1982 to 1994 number of days spent in each activity.

Activity and year	1 to 2 days	3 to 10 days	11 to 25 days	More than 25 days
	---------Percent of participants---------			
Bicycling				
1982	12	32	19	38
1994	14	32	19	36

Some changes in the frequency of activity seem particularly important. In sailing, the number of people who do so once or twice a year is down, but the numbers who do so more frequently are up. These numbers probably mean that sailing is increasing in popularity. The increase in popularity of backpacking is indicated by the increased percentages of people who are doing that activity more than 10 days a year. The same is true for primitive camping. Not only have the numbers of primitive campers increased as indicated in Table 2.1. The proportion of those people who camp more than 10 days a year also has increased.

Table 2.1 shows a major increase in the number of people who enjoy downhill skiing. Table 2.2, however, suggests that the proportion of all skiers who enjoy that sport more than 10 times a year has dropped. In cross-country skiing there is a different pattern. Not only have the number of cross-country skiers risen by 24.5 percent; the proportions of people who enjoy that activity frequently also have grown.

Chapter 3: Who Are The Participants?

Results of the NSRE provide some useful data on the characteristics of participants and their families. Some details are provided in the text of this Chapter on the characteristics of participants in individual activities. For the most part, however, the discussion here focuses on groups of related activities. Detailed information about participants in individual activities can be found in the tables following this Chapter.

Fitness Activities

This group of activities includes running or jogging, bicycling, and walking. Some 137 million Americans engage in at least one of these activities. Participation is highest for people 16-24 years old but remains high for people up to 49 years old. Participation decreases considerably for those over age 60 (fig. 3.1). As one might expect, the decrease in participation with age is most pronounced for running and jogging and least pronounced for walking. A little under half of the surveyed people over age 60 continue to walk outdoors.

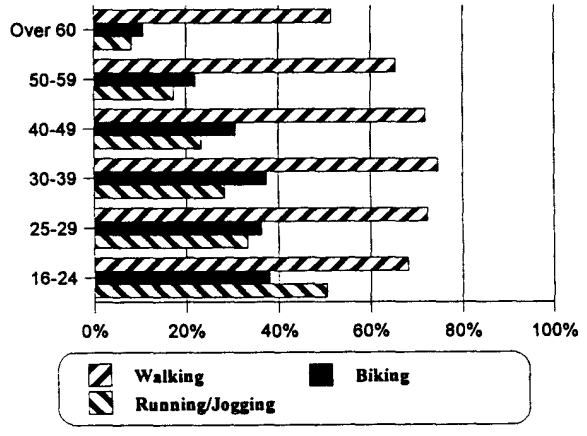

Figure 3.1–Percent of age group participating in fitness activities.

Race has relatively little relationship to participation in fitness activities. Walking and bicycling are somewhat more popular among Caucasians than among African-Americans and others (including Hispanics). Running and jogging, however, are more popular among minority group members than among Caucasians.

Males and females are nearly equal in their participation of fitness activities (49 vs. 51 percent). Running/jogging is slightly more popular with males (58.0 percent) than with females (42.0 percent). As with many activities, participation by females in fitness activities has risen in recent years. At present, the proportion of females walking is slightly higher than the proportion of males.

In all fitness activities, participation increases as family income increases (fig. 3.2). Since these activities are not particularly expensive, one can speculate that the increases in participation with income may be associated with greater amounts of leisure time and greater concern with physical fitness.

The likelihood of an individual participating in a fitness activity increases as the number of people in the household increases from one to four. There is no additional participation increase for households with more than 4 members. Participation

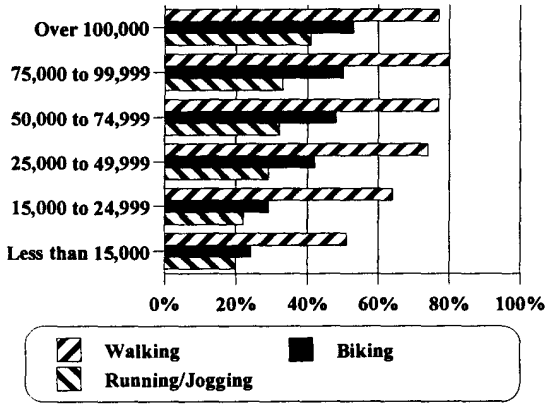

Figure 3.2–Percent of family income group participating in fitness activities.

increases as the number of family members in the household increases.
For those who completed high school, participation in fitness activities increases with increased education. Interestingly, however, participation in running and jogging is highest for those who have not completed high school. A possible explanation is that people 16, 17, and 18 years old who will be completing high school in the next few years are included in the group lacking high school graduation.

As the number of cars owned or leased by the household increases, so does participation in fitness activities. Number of cars is a strong indicator of income as well as mobility. Even so, the effects on participation in fitness activities, which do not require high income, are somewhat stronger than we expected.

Individual Sports

Golf and tennis are the individual sports included in the survey. About 44 million Americans over age 15 enjoy golf or tennis or both. Participation in both generally decreases with age, but, not surprisingly, the drop-off is greatest for tennis. About 10 percent of people over age 60 continue to play golf, while only about 6 percent continue to play tennis.

Caucasians are more likely to play tennis and considerably more likely to play golf than African-Americans. Minority group members other than African-Americans, are more likely to play tennis than are Caucasians.

Males are almost three times as likely to play golf as females. Numbers of male and female tennis players are more nearly equal. Participation in both sports rises rapidly as family income increases. As household size increases, so does the rate of participation in tennis, while the rate of participation for golf remains similar. No clear relationship between family size and participation exists for golf. There is a strong positive relationship between years of education and playing golf. No clear trend is apparent for tennis. For both sports, likelihood of participation increases as numbers of cars in the household increase. That relationship is stronger for golf than for tennis.

Outdoor Team Sports

The outdoor team sports surveyed include baseball, softball, football, basketball, soccer, volleyball, and handball. About 53 million Americans play one or more of these sports. In all these sports, participation decreases markedly with age. Nearly half of the surveyed people age 16-24 participate in at least one of the outdoor team sports. Only 4 percent of those over age 60 do so.

African-Americans and other minority group members are somewhat more likely to play team sports than are Caucasians. This difference holds true for all of the sports except soccer.

Males are far more likely to compete in outdoor team sports than are females. This difference has been decreasing in recent years, however. Participation in team sports increases somewhat with increases in family income. At over $100,000 in income, however, participation is lower than for middle incomes. As the number of people and the number of family members living in the household increases, participation in team sports increases markedly. A person living in a household of five or more is more than twice as likely to participate in team sports as is a person living alone. As amount of education increases, the likelihood of participation in team sports decreases. Participation rises markedly as number of cars in the household increases. Mobility may be the most important factor explaining this relationship.

Attending Outdoor Spectator Events

This activity group includes attending outdoor concerts and sporting events. About 118 million Americans over age 16 participate in one or both of these spectator activities. For both activities, attendance decreases with age. Concert attendance is similar among racial groups. Caucasians are somewhat more likely to attend outdoor sporting events than are minority group members. Slightly more males than females attend outdoor concerts (36 vs. 33 percent), but considerably more males than females (54 vs. 42 percent) attend outdoor sporting events.

For many reasons, including rising costs of admission, attendance decreases as family income decreases. Household size and family size have a slight positive relationship with concert attendance. However, the likelihood of attending an outdoor sporting event increases considerably as household and family size increases.

Outdoor spectator participation increases as education level increases. It also increases as the number of cars in the household increases.

Viewing or Studying Activities

This group of activities includes visiting nature centers, visitor centers, prehistoric sites, or historic sites; bird watching; wildlife viewing; fish viewing; studying nature near water; sightseeing; and visiting a beach or waterside. Some 153 million Americans over age 15 do at least one of the activities on this list. These activities are often a part of vacation trips, and they undoubtedly are often key events making vacations memorable.

Participation in these activities, as a group, increases until about age 40, then declines (fig. 3.3). The lower percentages of participation for people 60 and over are somewhat surprising–one might expect retirees to participate often in these activities. In any case, the popularity of all these activities is rather high.

Viewing and studying are more popular among Caucasians than among African-Americans and other minority group members. Among minority group members, participation is slightly lower for African-

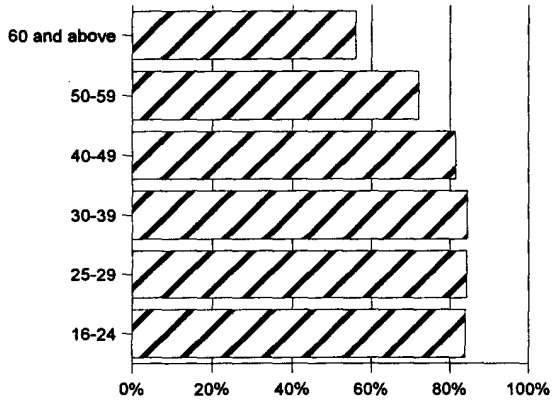

Figure 3.3–Percent of age group participating in viewing or studying.

Americans than for others. Males and females participate about equally in these activities. In general, viewing and studying nature increase with family income for incomes below $100,000 (fig. 3.4). Participation drops slightly for those in families with incomes over $100,000. The percentage of people enjoying these activities increases as numbers in the household and family members increase from one to four. Participation levels off for those in larger households. Participation rises sharply with increases in level of education and increases in number of cars in the household.

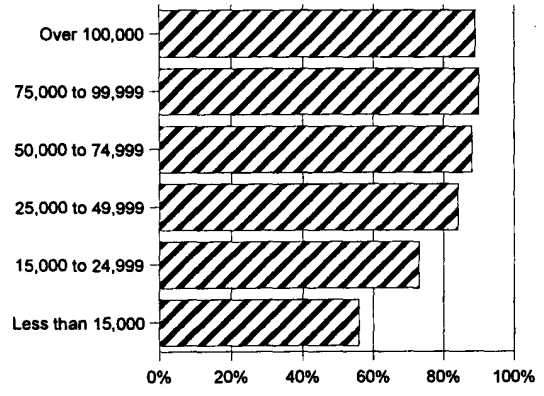

Figure 3.4– Percent of family income level participating in viewing or studying.

Snow and Ice Activities

Snow and ice activities are enjoyed by 36 million Americans over age 15. These activities include ice skating, snowboarding, sledding, downhill skiing, cross-country skiing (with it's various forms), and snowmobiling. Among these activities, the most popular is sledding with 20.5 million participants. Downhill skiing ranks second with 16.8 million, and ice skating with 10.5 million. Snowboarding has the least number of participants (4.5 million), however, this activity is becoming increasingly more popular in recent years.

As one might expect for such activities, which require considerable energy expenditures, participation is highest for the young, and drops off noticeably for people over 50 (fig. 3.5). Even so, 1.8 million people over 50 did some sledding in 1994-95, and 1.3 million did some downhill skiing.

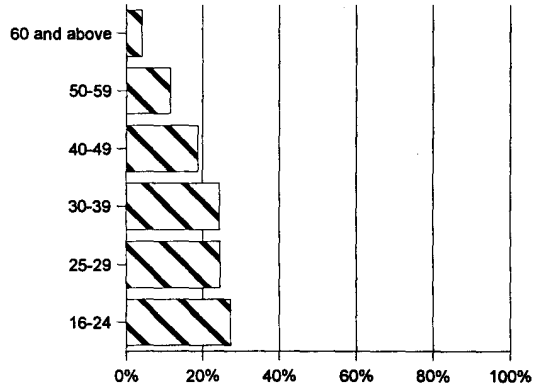

Figure 3.5– Percent of age group participating in snow and ice activities.

Among racial and ethnic groups, African-Americans are least likely to participate in snow and ice activities. Participation is almost twice as high among other minority

groups, and almost three times as high among Caucasians. Thus, for sledding, 18.9 million of the participants are Caucasian, and only 1.5 million are minority group members. For downhill skiing, 15.3 million are Caucasian and only 1.6 million are minority group members.

Males are more likely to participate in most snow and ice activities than females. For instance, participation of females in snowboarding and downhill skiing is almost half that of males.

The likelihood of engaging in a snow or ice activity rises steadily as household income rises (fig. 3.6). Downhill skiing in particular is relatively expensive and ski runs are seldom located close to population centers. For many, therefore, downhill skiing entails a major trip and an overnight stay as well as the cost of the lift, food, and services.

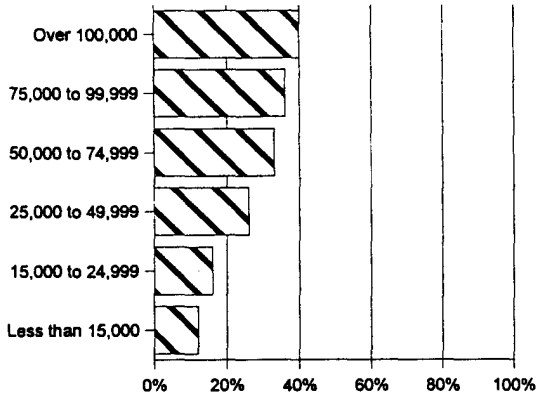

Figure 3.6– Percent of family income group participating in snow and ice activities.

Participation increases as number of people in the household increases from one to four. There is no increase for households with more than four people. The likelihood of enjoying snow and ice activities is higher among people who have completed college than for those who have not. Participation increases sharply as number of cars in the household increases.

Camping

This group includes various forms of camping in developed campgrounds as well as in undeveloped primitive areas. About 53 million Americans over age 15 camp. Of the two types, developed camping is more popular. In general, the likelihood of camping declines as a person ages (fig. 3.7). However, camping with a recreation vehicle (RV) is similar for all age groups. African-Americans are considerably less likely to camp than are Caucasians or other minority group members. Men are about 1.5 times as likely to camp as are females (31 vs. 22 percent). The gender difference is small for developed areas but quite large for primitive areas.

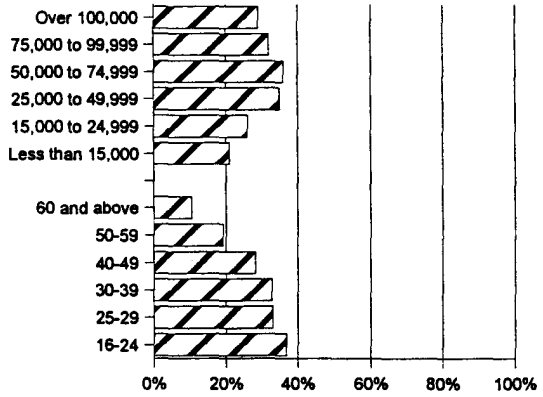

Figure 3.7– Percent of family income group and age group participating in camping.

The likelihood of camping increases with household income through $75,000 per year, but declines at the highest incomes (fig. 3.7). Camping is often a family activity, and

participation increases as household size increases. Level of education does not appear to be related to the probability of a person camping. The probability increases sharply as the number of cars in the household increases, however.

Hunting

This group includes big game, small game, and migratory bird hunting. Of the three, big game and small game hunting are about equally popular. Migratory bird hunting is considerably less popular. About 18.6 million Americans over 15 years old hunted in 1994-95. The popularity of hunting has declined in recent decades, while the popularity of viewing birds and wildlife has grown. Although many do both.

Until a person reaches age 60, the probability that he or she will hunt declines only slightly with age (fig. 3.8). Hunting is most popular among Caucasians and least popular among African-Americans. Caucasians are three times more likely to hunt than African-Americans and two times more likely to hunt than other minorities. Men are more than five times as likely to hunt as are women (17 vs. 3 percent).

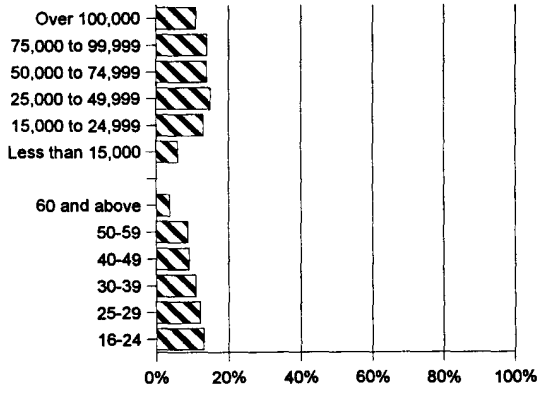

Figure 3.8–Percent of family income group and age group participating in hunting.

People with household incomes less than $15,000 per year are considerably less likely to hunt than are people with higher incomes. For people with incomes above $15,000, effects of income on the probability of hunting are quite small (fig. 3.8). Participation in hunting generally increases as household size and family size increases.

People who have completed college are somewhat less likely to hunt than are people with lower education levels. No other effects of education on hunting participation are apparent. Participation rises rapidly as number of cars in the household increases.

Fishing

This group of activities includes freshwater, warmwater, coldwater, saltwater, anadromous (migratory), and catch and release fishing. Almost 58 million Americans over age 15 fished in 1994-95. Freshwater and warmwater fishing are the most popular with ice and anadromous fishing being the least popular fishing activities. Participation in all types of fishing decreases as a person ages, but the sport remains popular among people over age 60 (fig. 3.9). Fishing is more popular among Caucasians than among minority group members. Men are considerably more likely to fish than are women (38 vs. 21 percent).

People with household incomes above $25,000 are more likely to fish than are people with lower incomes (fig. 3.9). Participation increases as number of people and family members in the household increases. Effects of education level on participation are small. As the number of cars in the household increases from one to

three or more, the probability of participation almost doubles.

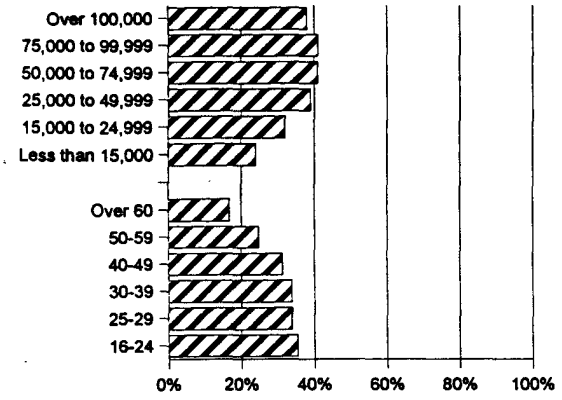

Figure 3.9– Percent of family income level and age group participating in fishing.

Boating

This group of activities includes sailing, canoeing, kayaking, rowing, floating or rafting, motorboating, water skiing, jet skiing, and sailboarding/windsurfing. About 58 million Americans over age 15 did at least one kind of boating in 1994-95.

Among boating activities, canoeing, kayaking, rowing, and rafting require a lot of physical exertion. It is not surprising, therefore, that participation in these more active forms of boating declines with age, particularly among people over 60. In 1994-95, 14.1 million people did some canoeing. Only 1.9 million of those people were over 60. Floating or rafting was enjoyed by 15.2 million people. About 1.4 million were over 50 years of age.

In contrast, motorboating, which requires little exertion, is popular for people of all ages. Of the 47 million people who did some motorboating in 1994-95, 10.6 million were over 50.

Caucasians are two to four times more likely to enjoy boating than are minority group members. Men are somewhat more likely to enjoy boating than are women (34 vs. 25 percent). Since boats are often expensive, it is not surprising that boating participation markedly increases as household income increases (fig. 3.10).

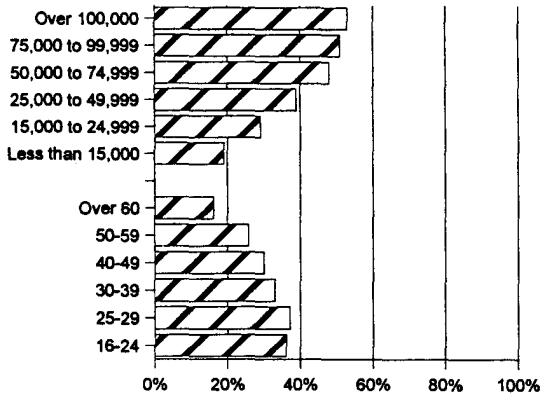

Figure 3.10– Percent of family income group and age group participating in boating.

Participation also increases as number of people in the household and family members in the household increases from one to three, then levels off for larger households. Perhaps because of a correlation with income, participation also increases as level of education increases. Perhaps for similar reasons, participation doubles as number of cars in the household increases from zero to one and doubles again from one to three or more.

Swimming

Activities in this group include surfing, pool swimming, non-pool swimming (in lakes, ponds, ocean, or river), and snorkeling or scuba diving. Just under 109 million

Americans over age 15 swam at least once in 1994-95.

In 1994-95, people 16-24 were about three times as likely to swim as were people over 60 years old (fig. 3.11). Nevertheless, of the 88.5 million people who swam in pools in that year, 17.5 million were over 50. And of the 78.1 million people who swam in places other than pools, 14.3 million were over 50.

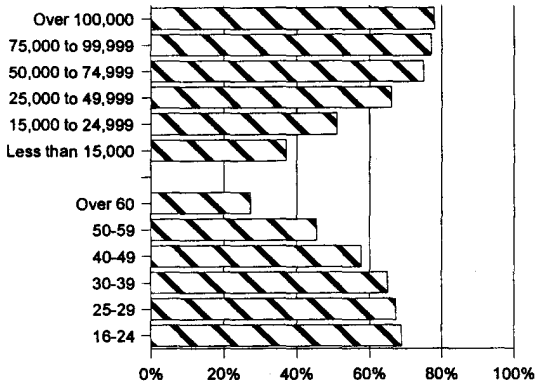

Figure 3.11–Percent of family income group and age group participating in swimming.

Caucasians are considerably more likely to swim than are minority group members, with African-Americans least likely to participate in all swimming activities. Men are a bit more likely to swim than are women, however, these were two to four times more males participating in surfing and snorkeling than women.

Swimming is not an expensive activity, however, there is a positive relationship with swimming activities and income. The likelihood of a person swimming increases as household income increases to $100,000 per year (fig. 3.11). Participation rates for pool and non-pool swimming double from the lowest income class to the highest, and quadruple for surfing and snorkeling.

Participation increases as number of people in the household increases up to four. Further increases in household numbers do not increase participation. As education level increases, so does swimming participation. And, as with virtually all activities, participation increases as number of cars in the household increase.

Outdoor Adventure

This group includes the traditional activities of hiking, backpacking, and horseback riding, plus orienteering, mountain climbing, rock climbing, caving, and off-road driving, which have only recently become popular. The popularity of all of these activities except horseback riding has grown rapidly in recent years. About 74 million Americans over age 15 participated in one of these activities in 1994-95. Hiking, whose popularity rose very rapidly, drew the most participants–47.8 million. Backpacking, another muscle-powered activity with a rapidly growing group of participants, attracted 15.2 million in 1994-95.

As one might expect for activities that require a lot of physical exertion, participation is greatest for the young and decreases with age (fig. 3.12). But people over 50 are well represented. Some 8.3 hikers and 1.6 million backpackers were over 50. Of the 7.5 million people who did some rock climbing in 1994-95, 700,000 were over 50.

Caucasians are much more likely to seek adventure activities than are African-Americans. Other minority group members,

however, participate about as frequently as Caucasians. Men are slightly more likely than women to enjoy adventure activities (55 vs. 45 percent). In general, the likelihood of participation in outdoor adventure activities rises as income rises through $75,000 per year (fig. 3.12). At incomes about $75,000 participation does not rise appreciably.

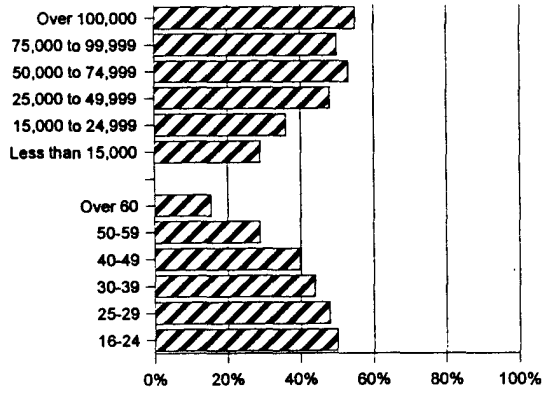

Figure 3.12– Percent of family income and age group participating in outdoor adventure activities.

Participation percentage increases as number of people in the household increases. It also increases with level of education. And it rises strongly as number of cars in the household increases.

Traditional Social Activities

This group includes family gatherings, picnics, and yard games. About 136 million Americans over age 15 participated in at least one of these activities in 1994-95. These are among the most popular outdoor recreation activities, and they probably always will be. They are particularly favored by families with young children, so participation is greatest for adults ranging from 25 to 40 years old (fig. 3.13).

Participation is somewhat, but not much greater for Caucasians than for minority group members. Minority group members do participate less in yard games. Similar numbers of men and women participate in these activities (50 percent each). There is a general rise in participation as household income increases to $100,000 (fig. 3.13). Participation also generally increases as the size of the household increases. Similarly, as the number of family members in a household increase, so do participation rates, especially for yard games.

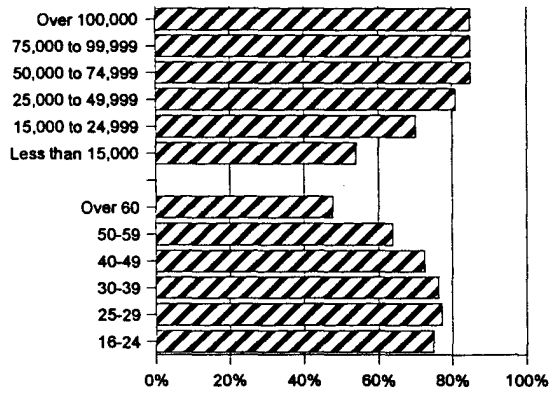

Figure 3.13– Percent of family income group and age group participating in traditional social activities.

There is a small increase in likelihood of enjoying these activities as level of education increases. And there is an increase as number of vehicles in the household increase.

Chapter 4: Regional Participation

This chapter examines regional participation patterns. It was necessary to combine 2 to 3 contiguous states into constructed regions so that numbers of sampled individuals were sufficiently large for statistical analysis. Tables at the end of this chapter contain information used for the figures presented.

Table 4.1 and Figure 4.1 indicate the states that are in each of the four regions.

Figure 4.1 - BLM Regional Specifications

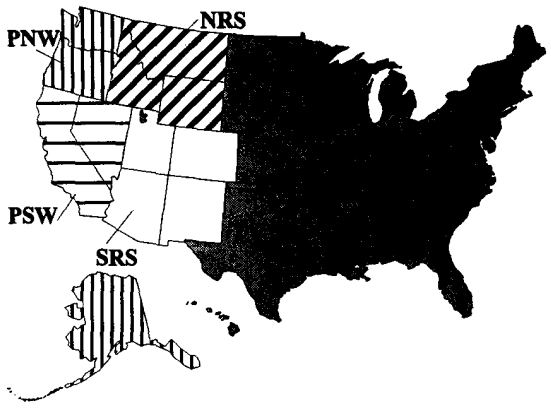

Table 4.1 - BLM Regional Specifications

Region	States
Northern Rockies (NRS)	Idaho, Montana, Wyoming
Pacific Northwest (PNW)	Oregon, Alaska, Washington
Pacific Southwest (PSW)	California, Nevada
Southern Rockies (SRS)	Arizona, Colorado, Utah, New Mexico

Individual Sports

Overall participation in individual sports is lowest in the Northern Rockies (MNW) at 21 percent and highest in the Southwest (SOW) at 23 percent. The percentage of people who play golf is lowest in the Pacific Southwest (PSW) at 15 percent and highest in the SOW at 17 percent. Tennis, however, exhibits approximately the same participation rate (10-11 percent) in three of the four regions, with the MNW showing the lowest participation percentage of 7 percent.

Team Sports

The overall participation for outdoor team sports ranges from 22 percent in the MNW and Pacific Northwest (PNW) to 26 percent in the PSW. Thus, the regional differences are quite small. These rates mask the somewhat larger differences for particular sports, but regional participation rates are quite similar.

Outdoor Spectator Activities

Overall participation rates for outdoor spectator activities are also similar with 56 percent in the PNW and 62 percent in the SOW. Some 34 percent of people who live in the MNW attend outdoor concerts, while 38 percent of the people in the SOW go to concerts. Attending sporting events, however, is lower in the PNW (42 percent) than in the other regions (45-50 percent).

Viewing Activities

Regional participation in one or more viewing activities ranges from 76 to 82 percent across regions (fig. 4.1). Variation is somewhat larger for individual activities.

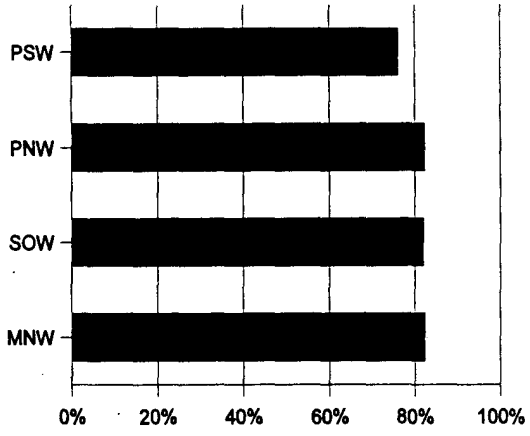

Figure 4.1 - Percent of participation in viewing activities, by region

For example, 40 percent of MNW visited a nature center in 1994-95 compared with 52 percent of the people in the PNW and SOW. Visiting a prehistoric site was greatest in the SOW (33 percent) and least in the PSW (19 percent). Not surprisingly, visiting a beach/waterside and studying nature near water were lower in the MNW (58 and 29 percent) and greater in the PNW (70 and 38 percent). However, given the differences in climate, culture, and availability of viewing opportunities among regions, the regional percentages are remarkably similar.

Snow and Ice Activities

For obvious reasons, MNWer's are considerably more likely to engage in outdoor snow and ice activities than are their counterparts in other regions (fig. 4.2), although all regions exhibit rather strong

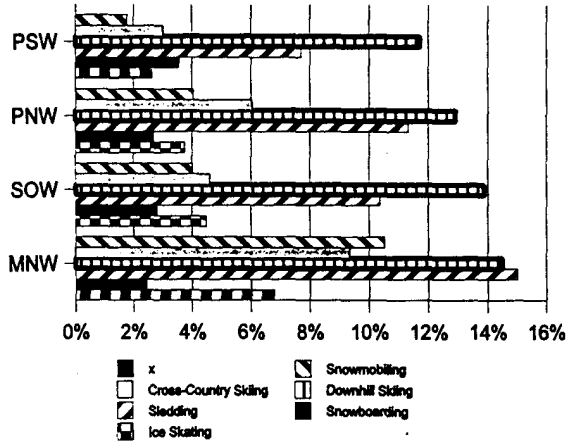

Figure 4.2 – Percent of participation in snow and ice activities, by region.

participation patterns in this category. Regional participation rates range from 18 percent in the PSW to 30 percent in the MNW. It is interesting to note that though the PSW has the lowest percent of participation it has the largest number of participants due to its' size.

Camping

Because of the vast areas of public land available for camping in the West, camping is more popular there than in many other

regions of the U.S. Some 32 percent of people in the PSW and 47 percent in the MNW camp (fig. 4.3). One third of persons in the MNW region primitive camp, while only a little above 1 in 10 does so in the PSW. In planning their recreation trips, people are clearly taking advantage of what is readily available to them.

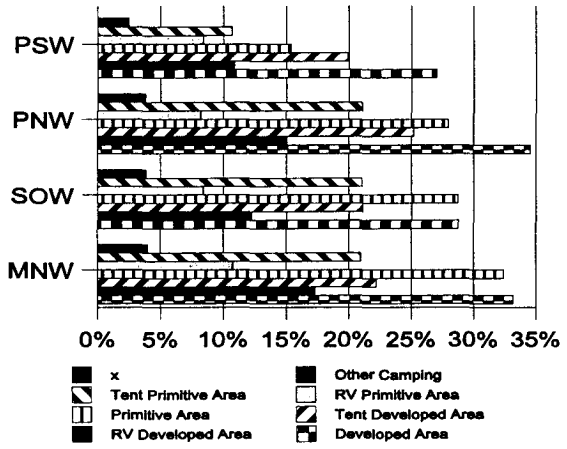

Figure 4.3 - Percent of participation in camping activities by region.

Hunting

Hunting is greatest in the MNW (24.5 percent). Approximately 4 percent of the people in the PSW hunt and 10-11 percent in the other two regions (fig. 4.4). These regional differences have something to do with availability of hunting opportunities, but they may also represent cultural differences. The low percentage of people in the PSW that hunt is probably related to cultural differences as much as limited availability of hunting land.

Fishing

Regional participation in fishing ranges from 22 percent in the PSW to 41 percent in the MNW (fig. 4.4). The individual kinds of fishing also vary considerably by region, depending largely on availability.

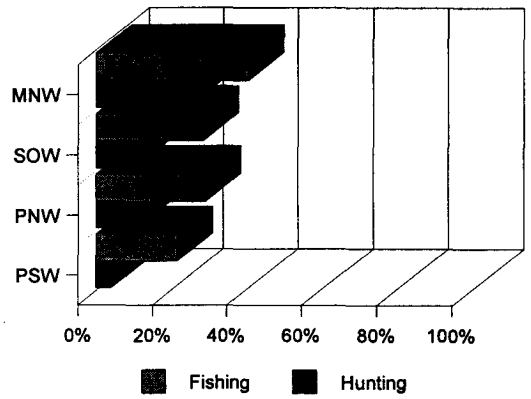

Figure 4.4–Percent of participation in hunting and fishing, by region.

Boating

The percentages of people who enjoy boating range from 24 percent in the SOW to 33 percent in the MNW region (fig. 4.5). Motorboating is by far the most popular of this group of activities. About 27 percent of the people in the MNW and 19 percent of those in the PSW region enjoy this activity. Of the non-motorized boating activities, the popularity of canoeing ranges from 3 percent in the PSW to about 7 percent in the PNW.

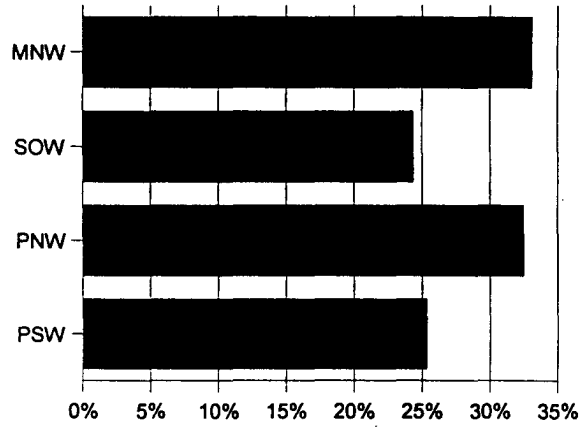

Figure 4.5–Percent of participation in boating activities, by region.

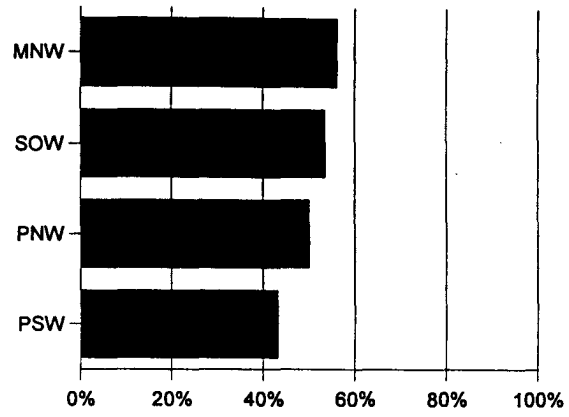

Figure 4.6–Percent of participation in outdoor adventure activities, by region.

Swimming

Swimming participation ranges from 47 percent in the MNW to 54 percent in the PSW. Not surprisingly, snorkeling/scuba diving and surfing are most popular in the PSW (9 and 3 percent).

Outdoor Adventure

Participation in the activities classified as "outdoor adventure" (fig. 4.6) is high in all regions, from a low of 43 percent in the PSW to a high of 56 percent in the MNW. This varies from the Eastern regions of the country not presented here. Differences in regional topography and in the presence of public land likely explain much of the difference.

Social Activities

Participation in one or more of the traditional outdoor social activities–yard games, picnicking, family gathering–ranges from 66 percent in the PSW to 75 percent in the MNW. Participation in yard games is highest in the MNW (37 percent) and lowest in the PSW (29 percent). The SOW region leads participation in picnicking (58 percent) with the PSW being the lowest (48 percent).

Number of Days of Participation Per Year

Fitness Activities

Of the fitness activities, people over the age of 16 spent more time walking. Nationwide, people walked approximately twice a week. People of the SOW walked 113 days of the year, while the MNW averaged 106 days per year. The SOW region led the nation in the number of days spent biking and bike touring at 45 and 21 days per year, respectively.

Viewing Activities

Visiting a prehistoric site occurred more often in the PNW (7 days) and least in the PSW (4 days). Participants in the SOW region also went bird-watching (98 days), more often than the rest of the nation, with the PSW region spending the fewest days bird-watching and wildlife viewing. Not

surprisingly, visiting a beach/waterside and studying nature near water occurred less frequently in the SOW region (14 and 15 days) and more often in the PSW (32 and 26 days).

Snow and Ice Activities

For obvious reasons, people in the SOW region participate less often in outdoor snow and ice activities than their counterparts in the other regions (fig. 4.7). Some form of snow and ice activity is enjoyed at least 8 days a year in the MNW, and PNW regions.

Camping

The number of days a year on which people over the age of 16 camped was surprisingly

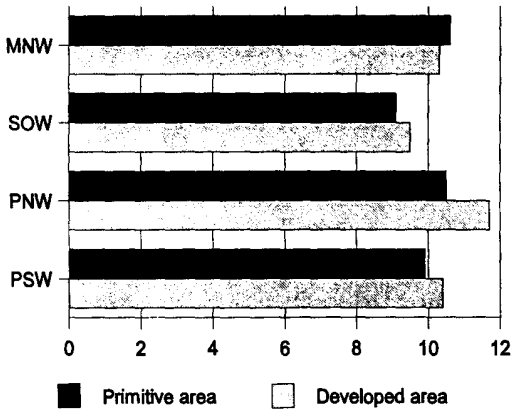

Figure 4.7 - Number of days of participation in snow and ice activities, by region.

similar among regions and types of camping. Regional variation in developed area camping was 10-12 days per year, and primitive area camping was 9-11 days per year (fig. 4.8).

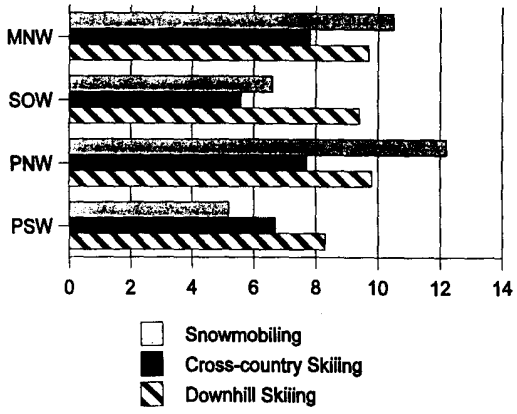

Figure 4.8 - Number of days of participation in camping activities, by region.

Hunting

Regional differences in the amount of days spent hunting follow the same trends as camping. Big game hunting is most popular in the PNW. People in that region spend about 16 days a year hunting compared to approximately 8 days a year in the SOW region. Conversely, people in the PSW hunt migratory birds over 10 days a year although the percentage of people participating in that form of hunting (1.6 percent) is below the national percentage (2.1 percent).

Fishing

The annual number of days spent fishing largely reflects regional differences in the availability of different types of water and fish species. For instance, people of the Pacific Coast spend the lowest average number of days freshwater fishing and the highest average number of days pursuing anadromous fish. The time spent saltwater fishing is also lowest in the SOW region, which is completely landlocked. Warm

water and coldwater fishing also reflect regional availability. People of the MNW fish for Warm water species more than 16 days a year (compared to approximately 10-14 days for the other regions) while people of the MNW region also fish for coldwater species, such as trout, more often than the Southern and Pacific regions.

Boating

The number of days people enjoy boating varies among activities and regions. Generally, people across regions pursue non-motorized boating less often than motorized boating. Regional variations are slight between the various forms of muscle or wind powered boating activities and range from 3 to 11 days per year. Within motorized water sports, motorboating is by far the most popular of this group of activities. People in all regions spend 8 or more days per year motorboating, with people in the PNW enjoying up to 14 days of this activity per year. Regional differences in the number of days boating may be a reflection of the resource base and the varying amounts of passion for that particular activity.

Swimming

People across the country spend a comparatively high number of days in the swimming activities, both pool and non-pool. On average, people in the PSW and SOW spend almost twice the average number of days in swimming than the other two regions (31 and 34 days/year respectively). Snorkeling/scuba diving, the least popular of the swimming activities, is most often done in the PSW region (8 days/year).

Outdoor Adventure

Off-road driving and horseback riding are the most popular of the outdoor adventure activities. People spend between 18 and 30 days off-road driving and between 28 and 36 days horseback riding. Off-road driving is most often done in the PNW and horseback riding is most often done in the PNW as well. Hiking is nearly equally popular across regions (17-19 days per year). Generally, the mountain climbing, rock climbing, orienteering and caving activities are performed more often in the Western regions of the country than in other regions of the U.S.

Social Activities

The number of days picnicking or participating in a family gathering is very similar among regions and activities. Between 9 and 10 days a year are spent participating in one of these traditional outdoor social activities. However, although the number of days spent participating in these activities seem low compared to other outdoor activities, the majority of the population participates in these activities, resulting in millions of participants per year.

Number of Trips Per Year

Fitness Activities

Biking was the only fitness activity in which the number of trips per year was determined. Across the regions, people over the age of 16 went on biking trips an average of a little less than once a month or 8 to 12 times a year. Regional variation was slight, with people of the Pacific Coast biking approximately 8 times a year.

Outdoor Spectator Activities

The number of trips taken to attend outdoor concerts was nearly the same among regions, ranging from 2 trips in the MNW to 4 trips a year in the PSW region.

Viewing Activities

The number of trips spent visiting a nature center showed minimal regional variation (4 trips per year). However, the number of trips spent visiting a prehistoric site was greatest in the PNW (4 trips per year) and least in the MNW (2 trips per year). People of the PSW also took trips to visit historic sites, bird-watching, wildlife viewing, and studying nature near water more often than the rest of the nation. Not surprising, people of the Pacific coast regions took the most trips visiting a beach/waterside (13 and 16 trips per year) while people of the SOW visited them least often (7 trips per year). The pattern in the number of trips taken to participate in a viewing activity was very similar to the number of days spent participating in a viewing activity (fig. 4.9).

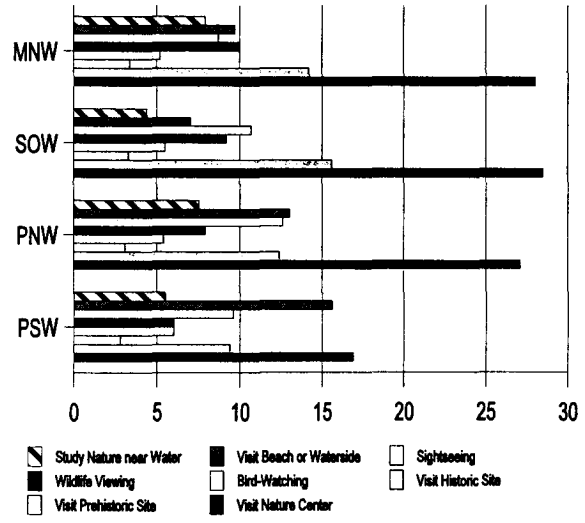

Figure 4.9–Number of trips per year spent in viewing activities, by region

Snow and Ice Activities

With the exception of downhill skiing, people in the SOW region took the least number of trips to participate in outdoor snow and ice activities than their counterparts in other regions. People in the northwest region of the country had on average more trips for snow and ice activities (fig. 4.10).

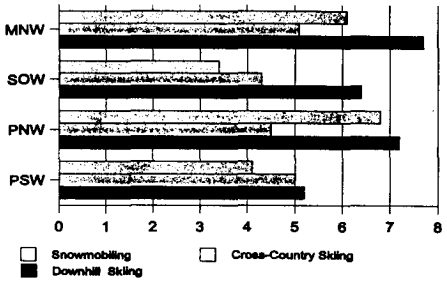

Figure 4.10–Number of trips spent skiing or snowmobiling, by region.

Camping

The number of trips a year in which people over the age of 16 went developed camping was similar among regions, all averaging from 4 to 6 trips a year (fig. 4.11).

Hunting

The number of trips people take for big game hunting is greatest in the PNW (9 per year) and least in the SOW (4 per year). Very little regional difference exists in the number of trips spent migratory bird hunting.

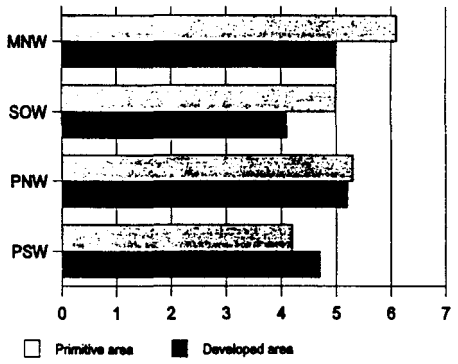

Figure 4.11–Number of trips spent camping, by region.

Fishing

The regional number of fishing trips taken per year closely mirrors the number of days spent fishing, most likely reflecting differences in availability. The PNW and PSW sees more saltwater fishing trips (6.6 and 8.4 annually) and the northern regions, PNW and MNW, have more coldwater trips attributed to them (10.5 and 11.5 trips annually). In addition to availability, proximity to fishing areas may explain some regional patterns.

Boating

Generally, people across all regions take more trips to go motorboating and water skiing than any other boating activities. Regional differences in the number of days spent boating is most likely a combination of the extent and proximity to the resource base, and the varying amount of passion for these activities. For instance, people in the PSW the most sailing trips (7 trips per year), the most canoeing trips (5 trips per year), and the most rowing trips (2 and a half trips per year) of any region. Passion for sailboarding also exists in the PSW. Because of the low number of participants in all other regions the PSW was the only one with enough observations to present a resulting number. Other boating activities seem to be fairly uniform across regions.

Swimming

Swimming is a very popular activity across the regions with people taking 4 to 9 trips a year to participate in pool and non-pool swimming. Regional differences are minimal. This is not surprising due to the widespread availability and low cost of this activity. However, again only for the PSW region, numbers of people who surf were adequate to present trip numbers.

Snorkeling is most popular in the PSW region (5 trips per year). However, variation across the regions is fairly slight with a range of 3 to 5 trips per year.

Outdoor Adventure

Off-road driving, horseback riding and hiking are the most popular of the outdoor adventure activities. People in the PNW region lead the rest of the country in the number of trips taken to participate in off road driving and hiking (15 and 12 trips, respectively), while the PSW and SOW take the most horseback riding trips (12 trips per year). The number of hiking, mountain climbing, and caving trips are relatively similar among regions with some notable variation in backpacking and rock climbing. People in the PNW take 7 trips per year to backpack, people in the SOW rock climb over 9 times per year, and people in the PNW go caving over 4 times per year.

Social Activities

The number of trips picnicking or participating in a family gathering is very similar among regions and activities. Between 5 and 7 trips a year are spent participating in these traditional outdoor social activities. The number of days spent participating in these activities are also similar. This indicates that while most participants usually travel some distance to participate in these activities, they do not usually stay overnight.

Chapter 5: Regional Demographics

As mentioned previously, the natural resource base of the four Bureau of Land Management regions of the western United States–the Northern Rockies, the Pacific Northwest, the Pacific Southwest, and the Southern Rockies–differ in many ways. These differences lead to regional variations in recreation patterns. In this chapter, demographics are presented at the BLM regional level. In conjunction with the national demographic participation estimates presented in Chapter 3, public land management agencies will benefit from the more specific estimates presented in these regional tables.

This Chapter consists of ten regional demographic tables. The first three tables segment the population by age (Table 5.1), race (Table 5.2), and gender (Table 5.3). In addition, there are three tables reflecting differences in social status; annual income (Table 5.4), the number of cars in the household (Table 5.10), and amount of education obtained (Table 5.7). The remaining four tables present differences in family or household characteristics. These encompass the total number of persons (Table 5.5), the number of family members (Table 5.6), the number of persons 16 years of age or older (Table 5.8), and the number of persons 6 years of age or younger (Table 5.9) living in a household.
Three participation estimates are presented for each of the 13 activity groups and 81 activities. The top number in each cell is the total estimated number of participants (in millions), below that is the percent of a particular demographic group which participates (column percentage), followed by the percent of participants in each activity belonging to each demographic group (row percentage). The reader will note that some of the cells are left blank. In those cases, was insufficient data available for a representative sample.

Table 5.1 - Number and percent of the MNW region population participating in outdoor recreation by activity and age, 1994-95. (Millions, top; percent of age group participating, middle; and percent of activity participants, bottom.)

Chapter 6: Recreation Management Issues

As stated previously, the NSRE was designed to provide information that can be used by recreation planners and managers at various levels of agencies. These data can also help guide policy decisions in forest management. The Bureau of Land Management is one of the sponsoring agencies for which NSRE data should help in making management decisions in the growing arena of outdoor recreation.

Some of the NSRE survey questions were oriented to specific issues of importance to current and future management decisions in resource agencies. These questions fall into four categories: characteristics of outdoor recreation trips, wildlife as a component of recreation trips, service and accessibility issues for persons with disabilities, and user attitudes and opinions concerning site attributes, funding, and management policy. The following text reviews results from the specific questions posed to help understand the significance of certain issues to the public for land management guidance.

Characteristics of Outdoor Recreation Trips

The data in this section were obtained by asking questions regarding the availability and use of specific facilities, fees charged, the operator, and the type and setting at the recreation sites visited by respondents. Results are presented by BLM region (Tables 6.1-6.7).

Table 6.1 provides the regional percentages of respondents who reported that the listed service or facility was available at the area the respondent last visited. Visitor centers and outdoor education programs are common facilities and services provided in such outdoor recreation areas. To assist management agencies in matters concerning visitor centers and outdoor programs, Table 6.2 describes the frequency of use of these facilities and programs.

Table 6.3 presents data obtained by asking who operated the area the respondent last visited. The type of site last visited by the respondent is presented in Table 6.4 and the type of setting of the respondent's main activity on their last trip is shown in Table 6.5.

The setting of outdoor recreation areas contributes to the overall experience for a visitor. Many visitors desire "developed" areas, others "primitive" areas. To further understand recreational use of primitive areas, Table 6.6 gives the percentage of persons who answered "Yes" to four questions about primitive areas.

How much to charge a visitor (if at all) to enter an area or use a facility is an issue of concern to many managers and administrators of public and semi-public lands. Table 6.7 enumerates the amount spent on entry fees, passes, or tickets for the respondent's last trip.

Table 6.1.--Percentage of population over 15 by services or facilities provided at the recreation area last visited and by western regions, 1994-95.

Area Provided Service or Facility	Region			
	Northern Rockies	Pacific Northwest	Pacific Southwest	Southern Rockies

15-19.99 dollars	1.7	1.5	1.7	1.6
20 dollars or more	5.4	6.6	8.7	6.3

Wildlife as a Component of Recreation Activities

The opportunity to see wildlife is often a significant component of an outdoor recreation trip. Activities specifically involving wildlife are very popular. This section covers wildlife as an attraction for outdoor recreation. This area may be of great concern for agencies responsible for the management of wildlife habitat and the recreation opportunities associated with wildlife. Table 6.8 presents data obtained by asking respondents if their last trip involved any wildlife activities. If the trip did involve a wildlife activity, the type of activity was identified.

Many outdoor recreation activities do not specifically involve or depend upon wildlife. Though they may be enhanced by its presence. Because of this, the interaction of recreation activities with wildlife is of great interest to land managers. Table 6.9 first gives the percentage of persons participating in outdoor activities involving a wildlife component and identifies the activity.

Finally, following up the question of whether or not a respondents last trip included a wildlife activity, Table 6.10 enumerates the number of trips in the 12 months prior to the interview that a respondent engaged in an activity involving wildlife.

Persons with Disabilities: Services and Accessibility

Outdoor recreation experiences are enhanced by services and facilities present on the site. Of concern to many land managing agencies are the special needs of persons with disabilities. Table 6.11 lists the services or aids that would enhance an outdoor recreation experience for respondents with disabilities; or persons who require assistance from others, adaptive equipment, or special facilities in order to participate in outdoor recreation.

People choose recreation areas for anticipated types and quantities of experiences. To make a variety of outdoor experiences possible, a variety of outdoor areas must be available. Although providing access to public lands for all people, including those with special needs is an important priority for managers of public lands. A special case is providing primitive experiences with few or no facilities, with more difficult access and with few to no conveniences for disabled persons. Table 6.12 presents the level of agreement by persons with disabilities to statements concerning accessibility in Wilderness areas.

User Preferences and Opinions Concerning Site Attributes, Source of Funding, and Management Policies

The popularity of outdoor recreation is astounding. Results of this survey have shown that 94.5 percent of Americans participated in some form of outdoor recreation in 1994-95. This survey also shows a trend of increasing numbers of participants, both from increases in the total population of the Nation and from increases in the proportion of people participating.

Because the number of participants in most outdoor recreation activities has increased, greater demands have been placed on existing recreation resources. In addition to the increase in the total number of participants, the client base is changing as well. Because of this, recreation resource managers are faced with increasingly difficult challenges of satisfying user demands and formulating policies that provide a balance between the protection of the resource base and user satisfaction for the greatest number of people.

This section explores the attitudes, concerns, and opinions of outdoor recreation

participants. The results presented specifically address 3 issues: site attributes, sources of funding, and management policies concerning provided services, wildlife issues, and wilderness areas.

The wide range of management agencies, area operators, and types of sites and settings provided, result in a wide diversity of potential outdoor recreation opportunities. Not only does an individual have opportunities to engage in outdoor recreation activities, they also have a wide range of sites at which to participate, each with its own attributes and characteristics. Table 6.13 presents the level of importance of nine attributes of recreation sites that contribute to making the site an ideal recreation setting.

The various public land management agencies are important providers of outdoor recreation. They are responsible for the operation and provision of many of the areas and opportunities to engage in outdoor recreation. However, public agencies are faced with some problems that private businesses do not face, most notably, the sources for financing services and facilities.

Along with the concerns about a balanced budget, increased taxes, and government spending, many Americans and land managers are concerned with the current and future status of funding public lands. To assist policy makers in addressing this issue, respondents were asked whether the cost of a variety of services and facilities should be paid for by user fees, taxes, a combination of both, or not provided at all. The results are presented in Table 6.14.

Policies concerning public land management not only shape the future of outdoor recreation, they are continually being formed from data from the past and input from the present. The NSRE, in general, and Tables 6.15-6.17, in particular, provide some of this data and participant input, which may be useful in forging future outdoor recreation policy.

Table 6.15 addresses the levels of agreement by participants with general statements about policies and services of land management agencies. Table 6.16 concerns itself with more specific policies concerning wildlife issues.

The Wilderness Act of 1964 allows Congress to set aside certain undeveloped lands for their preservation as Wilderness Areas. These areas provide benefits such as protecting water and air quality, scientific research, protecting ecosystems, primitive outdoor recreation opportunities, etc. Table 6.17 describes the level of agreement for respondents, both aware and not aware of the National Wilderness Preservation System (NWPS), with various values of wilderness. This list of values is by no means exhaustive because Wilderness Areas represent many different values for different people.

Table 6.8.-- Percentage of last outdoor recreation trips involving wildlife activities by activity and by Bureau of Land Management western region, 1994-95.

	Strongly Disagree	2.9	1.7	2.9	3.9
	R/DK	4.1	3.0	4.6	8.5
When I encounter wildlife during an outdoor recreation trip, it always makes me more satisfied with the trip	Strongly Agree	32.5	34.9	40.1	43.0
	Agree	67.5	60.6	47.4	46.5
	Disagree	0.0	0.9	7.7	5.9
	Strongly Disagree	0.0	0.6	1.9	0.0
	R/DK	0.0	3.0	2.8	4.5

[4]This level of agreement indicates the respondent refused to answer the question or did not know.

Table 6.17--Percent of persons above age 15 who feel the listed values for wilderness are very to extremely important by awareness of the National Wilderness Preservation System and by Bureau of Land Management western regions, 1994-95.

Value of Wilderness	Level of Agreement	BLM Region							
		Northern Rockies		Pacific Northwest		Pacific Southwest		Southwest	
Awareness of Wilderness Preservation System		Aware	Not Aware	Aware	Not Aware	Aware	Not Aware	Aware	Not Aware
Protecting Water Quality	Extremely Important	---	---	50.8	44.2	52.6	39.4	55.3	34.8
	Very Important			25.5	40.6	30.7	40.1	26.4	39.5
	Important			18.8	15.2	13.7	16.7	14.6	20.9
	Slightly Important			0.0	0.0	2.2	1.6	0.0	1.0
	Not Important			1.6	0.0	0.9	0.0	2.6	0.0
	R/DK[5]			3.3	0.0	0.0	2.3	1.1	3.8
Knowing that future generations will have wilderness areas	Extremely Important	---	---	44.5	28.8	52.3	32.2	48.8	47.1
	Very Important			29.0	42.0	30.1	45.1	25.9	35.6
	Important			22.1	27.3	15.0	17.6	22.9	14.5
	Slightly Important			0.0	0.0	1.6	0.5	1.3	0.0
	Not Important			1.0	1.9	0.0	2.0	0.0	0.0
	R/DK			3.3	0.0	0.9	2.6	1.1	2.9
Providing recreation opportunities	Extremely Important	---	---	9.5	16.8	21.4	16.1	31.3	10.9
	Very Important			26.3	20.4	27.5	28.8	19.0	31.6
	Important			47.9	45.5	37.8	39.6	43.8	48.0
	Slightly Important			7.8	8.1	7.6	5.3	3.5	6.7
	Not Important			3.9	9.2	5.8	7.1	1.3	0.0
	R/DK			4.6	0.0	0.0	3.0	1.1	2.9

[5]This level of agreement indicates the respondent refused to answer the question or did not know.
